WHOLESALER

White Magic

Quality clays and skilled craftsmanship have contributed to China's age-old record for fine porcelain and pottery. Since antiquity, this same quality of kaolin has been used by the Chinese for intestinal disorders, and it was thought to possess magical powers. Scientific research confirms the value of this remedy. The well-known adsorptive properties of

MANUFACTURER

The well-known adsorptive properties of kaolin are combined with the astringent and antiseptic action of zinc phenol-sulphonate in 'Pectocel.' Pectin evenly suspends the colloidal kaolin, presenting it in its most active form. Pleasantly flavoured and readily acceptable 'Pectocel' is an ideal combination for toxic diarrhoeas and other intestinal inflammations.

Supplied in bottles of 4, 16 and 80 fluid ounces.

ermicides.

Cresantol 3 @

A mixture of benzyl cresols. A pale clear straw-coloured fluid, almost odourless. A first-class base for lightly coloured and delicately perfumed antiseptic fluids. R.W. co-efficient 105 when suitably formulated

P. C. M. C.

(Chlorocresol B.P.)

A supplementary germicide particularly useful with Cresantol 3. An efficient fungicide which has extensive use as a preservative for pharmaceutical preparations. R.W. co-efficient 26 when suitably formulated. Small white or transparent crystals

Cresantol 15

Mixed chlorinated xylenols. The standard raw material used in manufacture of antiseptic and disinfectant fluids proved over a number of years. R.W. co-efficient 65 when suitably formulated. A clear brown liquid with a characteristic odour

P. C. M. X.

(Chloroxylenol B.P.)

R.W. co-efficient 65 when suitably formulated. Small white crystals. Odourless. Supplies are very much restricted for the present

For further information on the most suitable application of Monsanto Germicides, write to Sales Dept.

Supplied in two sizes:—4d. & 1/10d. (inc. P. Tax) and Dispensing Packs of 125 and 500 Tablets.

... it seems like miles

a familiar phrase in these days. People are 'finding everything too much' and are feeling tired and 'run-down', in fact, showing all the symptoms of vitamin B deficiency.

Offer them 'Vibelan' Vitamin B Compound B.D.H. It provides a means of correcting the group deficiency in a pleasant and convenient manner. Each tablet contains Vitamin B₁ 0.5 mg., Vitamin B₂ (riboflavine) 0.75 mg. and Nicotinamide 7.5 mg. in a yeast extract base. From two to four tablets provide the normal daily adult requirement.

Remember that if you cannot completely depend on the reliability of any one ingredient in your formula, the quality of your production is being jeopardised. Gum tragacanth, being a natural product, with natural imperfections and variations, can create production problems of this kind, *unless you make sure that they don't happen*, by specifying RED CARNATION the *stable* stabiliser.

RED CARNATION Brand Powdered Gum Tragacanth is gum tragacanth in a standardised form — uniform as regards viscosity, colour and fineness of powder. It is ground by a special process to ensure tenuity, it is tested at every stage of processing, and it is finally packed in airtight

tins, in four standard grades, so that you can be sure of receiving fresh gum tragacanth of exactly the same quality and characteristics every time you re-order. A 12 pp. illustrated booklet, "The Story of Gum Tragacanth" will be sent free on request by KIMPTON BROS. LTD., (Established 1882) 110 FENCHURCH STREET, LONDON, E.C.3. Telephone: ROYal 5544-5-6-7

FOR RISING STEADY RISING

Many of our stockists tell us that last season they sold more Cooper's Flyspray than ever before, in spite of the weather being unfavourable for the development of a heavy fly population.

Moreover, Cooper's Flyspray was the one most people asked for by name. This year, by stressing the point in our Press advertising and displaying the name strongly in all forms of publicity, we aim at making more and more people name Cooper's as the flyspray they want. Cooper's Flyspray and other Household Products provide a range that sells all through the year. Order your supplies now, or write for current Trade List if you have not received one.

This Durban factory is ready to serve you

The ban on imported consumer goods into South Āfrica adds further value to the services offered to manufacturers by

FASSETT & JOHNSON LTD.
This fine factory recently built in
Durban offers unrivalled facilities
to British manufacturers now denied
this valuable market.

The familiarity with local labour and with sources of raw material that has been built up by FASSETT & JOHNSON over many years of trading in the territory, gives them an experience that is now more than ever valuable to the manufacturer anxious to remain in or to enter this market.

In addition to full facilities for manufacturing British Proprietary products, and toilet preparations, FASSETT & JOHNSON offer, if required, a marketing service covering the Union and the Rhodesias. We invite enquiries which will be treated in confidence.

For pregnant mothers whose morning sickness persists throughout the day, Benger's Food is often the only form of nourishment that can be assimilated and the only means of forestalling a more serious derangement of the digestive system. The mother's need is for nutriment, not stimulant. Benger's Food supplies the perfect nutriment — milk — but so modified that its nourishment is retained and the digestive organs soothed.

News from DALMAS of Leicester

New waterproof protection

A NEW-TYPE ADHESIVE STRAPPING

Waterproof . . . has 101 First-Aid uses

DALMAS STRAPPING, a new waterproof plastic adhesive with 101 first-aid and other uses,

These spools are handy

is now in widespread demand everywhere. Because of this, supplies have been greatly in-

Dalmas Strapping can be cut to any size, gives 100% protection against water, dirt, grease and acid. That's why it's specially suitable for

tiny cuts, sore places, torn finger nails, etc. In particular, it is ideal wherever the fixing of a bandage would be awkward. Dalmas Strapping stretches all ways, so edges stick tight while allowing free movement of joints and muscles. Attractive counter sell-outs contain twelve 1/- spools, each 1 inch by 1 yard, price 8/-, or 24 spools, price 16/-. Also available in 2 inch and 3 inch widths.

DALMAS HEEL DRESSINGS. A new waterproof dressing that is specially designed for sore and blistered heels. Handy boxes, price 1/- retail.

DALMAS FINGER-TIP DRESSINGS. A new waterproof adhesive protection for cracked, cut or sore finger-tips. Handy boxes, 8/- per dozen, to retail at 1/- each.

DALMAS BOIL PLASTERS. A new waterproof protective dressing for boils. Skin-coloured, hardly shows. Handy boxes, price 10d. retail, including tax.

for cuts

Heavy demand for Dalmas First-Aid Dressings

To meet the nation-wide demand, we have further increased supplies of Dalmas, the waterproof plastic dressing that offers a totally new method of protecting cuts and minor wounds.

Dalmas gives 100% protection against water, dirt, grease and acid. So you need only cover the affected place and . . . no further trouble! You can actually wash with it on.

Dalmas stretches all ways (not just one way). That's why tight, edges stick cannot fray, cannot catch in clothes. What's more, Dalmas lessens infection risk, easy healing.

promotes safe and Display this box on your

Dalmas is skin-coloured, hardly shows. In attractive blue-and-white counter sellouts, containing three dozen 1/- boxes, price 8/- per dozen. Special quantity discounts. PLACE YOUR ORDER NOW!

Dihydrocodeinone

Powerful Antitussive

In respect to its action "Dicodid" stands midway between morphine and codeine. It possesses a definitely specific influence on the cough centre, three daily doses of only gr. 1/13 being equal to three doses of gr. $\frac{1}{2}$ codeine. There is but slight interference with expectoration, so that the preparation may also be used in cases where retention of sputum would mean danger to the patient.

Chemists to The King Lawrence Road, Tottenham, N.15

Three main reasons for the high reputation of 'Oxoid' Therapeutical Preparations are—Constant research and development of new techniques; complete technical control at all stages of manufacture; and, last but not least, a particularly rapid delivery service. The latter ensures that your orders, by telephone, letter or telegram, are despatched the day they are received.

The many 'Oxoid' preparations include - Synthetic Hormones, Vitamins, Anti-anæmic and Glandular Preparations.

NEWS OF THE WEEK

N.H.S. Rota Payments.—The Minister Health has advised Executive Councils at payments to chemist-contractors for ta services should not be delayed until I payment for prescriptions can be ade; final statements of account for any rticular month's dispensing should inde, in addition, payment for rota rvices in any subsequent months for uich claims have been certified by the puncil.

International Students' Conference.—meeting of the International Pharmacy udents' Federation is to be held in Lonn, August 23-26, to discuss and ratify a aft constitution. Student bodies in fiftyee countries have been invited to send presentatives. Students in Great Britain ay obtain further particulars from the cretary of the British Pharmaceutical udents' Association, 3 Endsleigh Street, andon, W.C.1.

Research Development Corporation. onditions for the appointment of memrs of the National Research Development orporation, to be set up under the Development of Inventions Act, 1948, are laid down in the National Research Development Corporation Regulations, 1949 (S.I., 1949, No. 1097, H.M. Stationery Office, price one penny. [The Corporation is intended to assist inventors without resources or commercial backing to develop inventions that are proved valuable.]

Millionth Camera to Minister.—When he visited the works of Kodak, Ltd., Harrow, on June 15, Mr. Harold Wilson (President of the Board of Trade) was presented with a Brownie box camera, the millionth box camera to be made at the works since the war. The presentation was made by Mr. E. Jackson, who has a twenty-six-year record of service with the company. Mr. Wilson congratulated the workers on the company's fine export effort, which had earned the country £3 millions of foreign currency in 1948.

Medical Trade Unionists' Views.—A report on health centres issued recently by the Medical Practitioners' Union recommends that in towns a health centre should be built, usually, for every 20,000 of the

population, with a number of smaller satellite centres where there are sparsely populated areas grouped round a densely populated area. The report suggests that the services available at centres should be limited to avoid duplication of those provided at out-patient departments of hospitals, etc. During the day patients could obtain their drugs from chemists' shops, but each centre should have a small dispensary to be open during the evening and at certain times at the week-end. For this purpose, says the report, a "visiting pharmacist" would be required.

S.C.I. Annual Meeting.—The sixtyeighth annual meeting of the Society of Chemical Industry is being held in Manchester, July 11-15. Lectures on "The Technical Development of Fermentation Processes" and "The Production of Vitamins by Fermentation" have been arranged by the Fine Chemicals Group of the Society, and Professor Paul Karrer, Ph.D., D.Sc., is to give "A Short Survey of the Biological Significance of the Vitamins and Related Substances." Dr. Foster Dee Snell, to whom the Society's medal is to be presented, is to speak on "Detergents and Detergency." Works to which visits have been arranged include those of Thomas Hedley & Co., Ltd., British Schering Research Laboratories, Ltd., Manchester Oil Refinery, Ltd., Petrochemicals, Ltd., Shell Chemical Manufacturing Co., Ltd., and Imperial Chemical Industries, Ltd.

Review of Soap Entitlements. - The Ministry of Food is now prepared to consider applications for additional soap from chemists whose existing credits credits are below the appropriate level (400 rations per eight weeks) fixed for new entrants. Additional credits will not be granted to retailers whose existing credits, because of previous dissipation of credit, have fallen below the new entrant level. To assess a trader's entitlement the Ministry will compare the average credit available to him for his domestic trade during the two 8-week periods beginning January 30 and March 27 with the credit granted to him at the time his account was opened. The higher figure will then be compared with the new entrant level. Retailers who consider they have a case for review should apply to their local Food Office during ration period No. 2 (June 19-July 16). Any additional soap credits to which they may be entitled will be granted on the deposit slips, SP.2, issued at the beginning of ration period No. 3.

LOCAL NEWS

Reigate and Redhill Officers.—At t annual meeting of the Reigate and Redh Pharmacists' Association, recently, the following officers were elected:—Chairma Mr. J. R. Heather; Vice-chairman, M. H. J. Sadler; Treasurer, Mr. G. T. Joh son; Secretary, Mr. S. W. Hawkins, Prices Lane, Reigate.

No Pharmacy on Housing Estate. The Housing Committee of Bradford Coporation has decided to take no actio for the time being in response to a requemade by the local Pharmaceutical Committee, through the Health Committee, f suitable premises for a pharmacy to I made available on a new Corporation housing estate at Buttershaw.

Chemists' Golf at Seaton Carew.-The Northumberland and Durham Chen ists' Golfing Society met at Seaton Care on June 15 under ideal conditions to con pete for the Johnson & Johnson tropk and the Bleasdale tankard.. The troph was won by Mr. T. Beattie, M.P.S., 7 net (10); the tankard was won by Mr. V Hardy, M.P.S., Sunderland, 78 net (17).

Edinburgh Chemists' Golf.—Winnel in a competition held by the Edinburg Chemists' Golf Club at Bruntisfield, recently, were as follows:—Virol prize an scratch prize, Mr. J. B. McCaig (3) 74 club prizes (No. 1 section) (1) Mr. H. F. Gauld (8), 78; (2) Mr. A. H. Gillies (9, 79; (No. 2 section) (1) Mr. A. H. To (15), 76; (2) Mr. J. J. Ferguson (20), 77

Society's Exhibit at Harrogate.—Th times at which the Pharmaceutical Society exhibit at the annual meeting of the Britis Medical Association (see C. & D., June 18 p. 705) is to be open to members of the loca branch of the Society have been extende to include Wednesday afternoon and Thursday afternoon, June 29 and 30. The whibit is being staged in the pathological department of the Royal Bath Hospital Harrogate, and not as previously stated.

Pharmacy Students' Visits,—Member of the Pharmacy Students' Association of the Merchant Venturers' Technical College, Bristol, were recently taken on a town of the Wellcome Museum of Medica Science, London, and the Wellcome Research Laboratories, Beckenham, where they were entertained to lunch and tea. The visits concluded with a showing of the film "The Preparation of Diphtheria Antitoxin and Prophylactics," produced by the

Vellcome Film Unit. The party was companied by Mr. W. Cooper and other cturers from the College.

Middlesex N.H.S. Dispensing.

ational Health Service prescriptions disnsed in Middlesex in January numbered
014,037 (an average of 1.6 prescriptions
r form), i.e., 2.6 times the number disnsed under National Health Insurance
January 1948. Ingredient costs in Januy 1949 totalled £84,505 (3.3 times the
48 figure), dispensing fees £51,969 (5.1
nes 1948). The total prescription cost
is £147,021 (4.1 times 1948). The numr of persons on doctors' lists had inassed to 2,328,401 (from 1,125,006)
d the prescription frequency per patient
s 0.43 (against 0.33 in January 1948).

M.O.H. Spokesman at Worthing.—At meeting held by the West Sussex Pharaceutical Committee at Worthing on ne o, Mr. T. Cole in the chair, Miss E. Mozley-Stark, Ph.C. (pharmaceutisection, Ministry of Health), answered embers' questions on National Health rvice topics for about one-and-a-half urs. The chairman, thanking Miss Moz-Stark for her explanations, said the st Sussex Pharmaceutical Committee uld in future regard the Ministry of alth's pharmaceutical section not just an address but as a body of pharmacists rking for the benefit of the profession.

Presentations to Staff.—At a dinner en by Evans Medical Supplies, Ltd., ently, to representatives and managerial ff, Mr. Ian Fergusson (chairman and naging director), presented the Evans es cup to Mr. W. R. B. Sheldon emists' representative in South-west ncs). Runner up was Mr. J. P. Cargill emists' representative attached to the npany's London house). On June 8, Mr. gusson made long-service presentations the staff in the company's principal crseyside establishments. Among the teen recipients were a director (Mr. E. J. Sendall, M.P.S., with forty years' vice), and Mr. J. A. Davies (with enty-five years' service), who is now in arge of the company's Melbourne office. Fergusson said that sales during 1948 I reached a record level.

Pharmaceutical Tests on Animals.— . G. F. Somers (Glaxo Laboratories, d.), speaking at a meeting of the Harvaranch of the Pharmaceutical Society Chesham on May 25, described the armacological tests on animals that were

carried out on a new chemical substance before its release for clinical trials. Illustrating his remarks with references to Heptalgin, Dr. Somers said that initial tests had shown the new drug to have a high analgesic activity combined with low toxicity. The compound had then been examined in detail for other pharmacological properties such as its effect on respiration and the heart, and for possible spasmolytic properties; it had been administered daily to animals over a long period to ensure freedom from chronic toxicity. Mr. T. Marsh then described the clinical development of the drug, emphasising that animal tests could act only as a guide to the value of the drug on humans. He described the difficulties of assessing analgesic activity in man, and said the great variations between individuals and their responses was especially marked for synthetic analgesics.

Pricing Problems Reviewed.—Addressing the Reigate and Redhill Branch of the Pharmaceutical Society recently, Mr. F. C. Wilson (a member of Council) said hundreds of prescriptions were being received at pricing bureaux each month endorsed "D.D.A." but which did not, in fact, come within the provisions of the Dangerous Drugs Act. Such wrong endorsement created unnecessary delays. Mr. Wilson, created unnecessary delays. explaining the basis upon which proprietaries would be priced, said that during May and June it would not automatically be assumed that any prescription had been dispensed from a purchase-tax-free pack. For subsequent months it was hoped to have an agreed list of proprietaries that would be priced on the untaxed basis. Until the authorities abandoned their efforts to avoid pricing prescriptions and instead gave their attention to getting the work done expeditiously, little improvement might be expected, he said. The number of staff at present employed was little, if any, greater than would have been required in 1947 to price one month's prescriptions in one month. The number of bureaux was wholly inadequate and nothing short of a drastic increase in their number would meet the situation. Referring to the Society's convalescent home at Birdsgrove House, Mr. Wilson (in reply to an interjection) explained that the charge, ridiculously low though it might seem, had been fixed deliberately so that no member of the Society need ask for financial assistance to enjoy the benefits of the home.

Pharmaceutical Pilgrimage to Lourdes. A pilgrimage of pharmacists to Lourdes is to leave Dublin on August 1 and London on August 2, returning to London on August 18, and Dublin on August 19, spending fourteen days at Lourdes. cost is approximately £34 from Dublin, and £29 from London. Applications for a few remaining vacancies should be made to the pilgrimage secretaries, 69 Palmerston Road Dublin.

N.I. Health Service Criticised .- The Northern Ireland House of Commons unanimously passed a resolution on June 14 expressing concern that the operation of the State health service was leading in some respects to a lowering of standards and integrity in some branches of the professions and asking assurance that steps taken in the development of the services would not tend to lower standards. accepting the motion, the Minister of Health (Mr. Grant) emphasised that it must not mean that the House did not approve of the health services scheme, free medical treatment and free drugs.

Excursion to Ballygally.—The annual excursion of the Chemists' and Druggists' Society of Ireland, held recently, was to Ballygally, co. Antrim, where tea was served at Ballygally Castle. The president (Mr. Fred Storey, C.B.E.) welcomed the members and guests, on whose behalf Messrs. H. F. Moore (treasurer, Pharmaceutical Society of Northern Ireland) C. Abernethy and J. Irwin, Miss A. E. Strachan (secretary, Ulster Chemists' Association) and Mr. Herbert Johnston, Larne, responded. A vote of thanks to Mr. H. McQuitty (secretary) for organising the outing was passed on the motion of Mr. H. Johnston and Mr. F. Boyle.

Football Club's Annual Meeting .-In his report to the annual meeting of the Irish Chemists' Rugby Football Club held recently in Dublin, Mr. C. A. Roche (secretary), said the year just closed had been the most successful in the club's history. Of twenty-one matches played fifteen had been won and one drawn. Country outings, one to Enniscorthy and one to Tullamore, had both been successful. The following officers were elected or re-elected: President, the president of the Pharmaceutical Society of Ireland; Vice-presidents, the outgoing vice-presidents with Messrs. J. J. Tierney, N. O'Malley and J. G. Coleman as additional vice-presidents; Car tain, Mr. J. J. Dawson; Vice-captain, M C. A. Roche; Treasurer, Mr. G. O'Connor; Secretary, Mr. M. Kissane; Conmittee, Messrs. C. Foley, A. Henecy, I Gannon, J. J. Dawson, C. A. Roche, C O'Connor, and M. Kissane. Former men bers are invited to rejoin as "pavilion members at a subscription of 7s. 6d. eacl Applications should be sent to the secre tary (Mr. Kissane), at 10 Fitzroy Avenue Drumcondra, Dublin. The meeting cor cluded with a vote of appreciation to th late Mr. F. X. Meagher whose interest i the Club from its formation had bee much appreciated.

OVERSEAS NEWS

Streptomycin Royalties.—Dr. S. Wak man, the discoverer of streptomycin, ha presented the money to Rutgers University, New Brunswick, which patent right on the drug bring him. The university wi use the money to establish an Institute c Microbiology with Dr. Waksman as its first director.

British Goods in Portugal.—Portugues importers of goods from Great Britain ar hiter complaining that lately they have beed finding it difficult to obtain licences to imports. Great Britain appears to be on of the countries most affected by a recen 20 per cent, increase in import duties. Fo imports of perfumery, hair lotions, tooth pastes, face powder, etc., Britain held firs place in 1948, with 4,119 kilos (420,99) escudos), out of a total of 9,765 kilo (1,354,815 escudos).

Druggists' Conference.-The Indian fifth annual general session of the All India Chemists' and Druggists' Federation was held recently in Bombay, with Mr P. U. Upadhyaya (president) in the chair. Resolutions passed urged (inter alia) that the Central Government should (1) adopt to Excise rates on spiritous medicinal preparations that would be uniform throughout the country; (2) abolish the granting of monopoly or patent rights on pharmacopæial preparations; (3) grant the Federation representation on the Import Advisory Council; (4) secure uniform administration of the Drug Standard Control; (5) prepare a list of drugs and medicines the indiscriminate use of which was considered harmful; and (6) prohibit doctors from the operating dispensaries in areas where chemists' establishments already existed.

TOPICAL REFLECTIONS

.S. Food and Drug Regulations

A reminder of the stringent provisions the United States Food, Drug and Cosetic Act, 1938, is useful. You summared the Act and the first effects of its lministration in the C. & D., 1938.II.199 d 1939.I.581. One result of the recent ar may well be that British manufacturers ho have not had a long experience of exrting are somewhat vague as to the re-irements of this piece of legislation. om an article in "Industrial and Enginring Chemistry" published in 1939 it pears that between June 25, 1938, and arch 27, 1939, more than 400 applicaons were filed in order to comply with e condition that new drugs can only be troduced after the United States Secrery of Agriculture has certified that the ugs or products of them are safe in use. irther, it was then estimated that 97 per nt. of the labels used in "the drug instry" had been revised in consequence new official stipulations. Colours for ugs, foods and cosmetics have to be ceried as safe and suitable: in 1939, colrs tentatively accepted numbered 132, a mber that has, no doubt, since been ded to. The definition of "misbrandz" includes failure to state as well as isstatement. Your abstract on p. 804 ves further details of this comprehensive t, the scope of which extends even to ntainers for drugs and other products. addition to its importance for exporters, subject has an interest for retailers in is country; no salesman in pharmacy ould be content to hand out packed ods without a clear understanding of nat is being sold.

ollection of Waste Paper

All is not well with the arrangements r collecting waste paper. At an early age of the late war (C. & D., 1940.I.418) us tressed the need for handing waste inted matter, including showcards, to cal authorities for processing. As jourlists know only too well, the shortage of per in this country is still acute. From report in a provincial daily newspaper uch has been sent me it appears that icial zeal in the important salvage frive" has lapsed into apathy. The port, published on June 16, states that a recent meeting of a rural district uncil in Suffolk it was decided to dis-

continue the collection of waste paper because, the chairman of the Public Health Committee said, local warehouses were "bulging" with it. The senior partner of a firm collecting such paper has amplified this statement. The situation, he declared, is in a hopeless muddle; mills cannot absorb the paper. Yet appeals to the public to collect it continue. It is even suggested in high quarters that it may be desirable to export some of this waste material. Moreover, farmers are unable to dispose at reasonable prices of straw for manufacturing newsprint. A later Press report gives similar information from a Scottish source. How this trouble has arisen I do not know. The remedy? That must be sought in a direction whence remedies are supposed to come.

Definitions

Students are still being advised, I presume, to remember that a satisfactory definition includes the thing defined and excludes everything else. When they emerge from the examination hall as pharmaceutical chemists or as graduates, they will sooner or later discover that in daily life not every definition has this desirable quality. An instance occurs in the article on pp. 806-07 headed "Operation of Goods Vehicles." An animal is there defined as "any horse, cattle, ass, mule, sheep, piggoat or dog." The definition is provided in connection with road accidents causing damage or injury. It thus seems that if a cat, however valuable as a prizewinner it may be, is killed by a vehicle, the provisions of the Road and Rail Traffic Act, 1933, relating to vehicular mishaps do not apply. Other creatures might be named, the loss of which in a collision on a public highway would be a grief to their owners; vet they would not be regarded as animals in law. Legal definitions sometimes appear strange to lay minds. In a report of a recent court case I read: ". . . a firework was an article that produced a pyrotechnic effect created by means of fire.' A literal translation of the adjective "pyrotechnic" is "pertaining to the art of fire." The definition cited thus involves, unless I have misread the phrase, some tautology. For examples of concerted efforts to define words with precision the shorter dialogues of Plato may be recommended. Xrayser

BIRTHS

BUTLER.—At Edinburgh, on June 11, Louise (née Glover), the wife of James Charles Butler, M.P.S., Redcliffe, Balerno, Midlothians, of a daughter.

RICHARDSON.—On June 6. Nan, the wife of Francis Haire Richardson, M.P.S.N.I., Randalstown, co. Antrim, of a daughter.

MARRIAGES

KINGDOM—JONES.—At Leeds, recently, Mr. S. J. Kingdom, Exeter, to Bronwen Mary Jones, M.P.S., Flat 3, 24 Shire Oak Road, Headingley, Leeds, 6.

Silver Wedding. — ROBERTSON-ROBERTSON.—At Kirkintilloch, Glasgow, on June 17, 1924, David Barr Robertson, M.P.S., to Cecilia Robertson. Present address: 38 Kirksyde Avenue, Kirkintilloch.

DEATHS

COLE.—On March 2, Mr. Wallace Bramwell Cole, M.P.S., The Warren, Sible Hedingham, Halstead, Essex. Mr. Cole qualified in 1920.

Donaldson. — At Larkfield Hospital, Greenock, on May 29, Mr. Harry Donaldson, M.P.S., 116 Albert Road, Gourock, Renfrews. Mr. Donaldson, who qualified in 1910, was the representative in Scotland for British Alkaloids, Ltd.

Franklin.—On June 6, Mr. Peter Gerald Johnston Franklin, M.P.S., 23 Sandown Road, Lake, Sandown, Isle of Wight, aged thirty-six.

GRIFFITHS.—On June 7, Mr. James Alfred Griffiths, M.P.S., 4 Beauchamp Hill, Leamington Spa, formerly of Worcester. Mr. Griffiths qualified in 1920.

KETTLEWELL.—On June 9, Mr. William Lancelot Kettlewell, M.P.S., 69 Fulford Road, York.

LEMPERT.—On May 29, Mr. Harry Lempert, M.P.S., 64 Brooklands Road, Prestwich, Manchester, aged thirty-seven.

MacLennan.—At 39 Pentland View, Edinburgh, on June 16, 1949, Mr. Roderick MacLennan, M.P.S. Mr. MacLennan was in business at 84 Comiston Road, Edinburgh, for over forty years.

MUSTON.—Recently, Mr. Samuel Henry Muston, M.P.S., Two Gables, Calton Magna, Rotherham, Yorks. Mr. Muston qualified in 1904. PORTER.—Recently, Mr. Leonard Geor Griffiths Porter, M.P.S., 92 Woodfo Avenue, Marsh Mills, Plympton, Devo Mr. Porter, who qualified in 1929 w formerly the manager for Boots, Ltd., Pl mouth, and opened a pharmacy on hown account at St. Peter's Road, Crow hill, Plymouth, only a year ago. He survived by his widow and twin bal daughters.

STOCKS.—On May 31, Mr. Georg Arthur Stocks, M.P.S., 19 Bradford Roa Brighouse, Yorks, aged sixty.

TURTON.—On June 19, following a gur shot wound, Mr. Thomas Herbert Ha grave Turton, M.P.S., 118 Bewsey Roa Warrington, Lancs, aged forty-three.

WILLS

Mr. S. F. Brockington, M.P.S., The Pharmac Church Street, South Brent, Devon, left £3,2! (£2,695 net).

MR. C. J. KNOWLES, M.P.S., 15 St. Clemen Buildings, Lever Street, London, E.C.1, le £640 (£610 net).

Mr. H. Wright, 14 Bankart Avenue, Oadb Leics, formerly of A. De St. Dalmas & Co., Ltd Leicester, left £3,848 (£3,788 net).

MR. O. J. DAVIS, 1 St. Clements Road, Wigas governing director of Winstanley & Fairhurs Ltd., Wigan, left £18,301 (£18,132 net).

MR. W. WILKINSON, M.P.S., 51 Longley Lam Northenden, Manchester, and 80 Palatine Road Manchester, left £6,032 (£5,603 net).

Mr. J. Robertson, M.P.S., 17 Hillhouse Road Blackhall, Edinburgh, formerly of Spey Bay, le £3,717.

Mr. H. Sagar, M.P.S., 50 Church Street, Gain borough, Lincs, formerly of Sheffield, left £3,85 (£3,617 net).

Mr. J. Evans, M.P.S., 7 St. Barnabas Roac Cambridge, and 92A Mill Road, Cambridge, lel £24,163 (£24,010 net).

Mr. L. G. K. Hayns, M.P.S., 268 Anglese Road, Burton-on-Trent, Staffs, left £2,042 (£96 net).

Mr. E. Prebble, M.P.S., 30 Deane Road, Liver pool, left £5,109 (£5,052 net). He left all his shares in Prebbles, Ltd., and £250 to his son, Mr Harry E. Prebble, M.P.S.

MR. R. H. PARKINSON, M.P.S., 66 Higher Bank Road, Fulwood, nr. Preston, formerly for many years in business in Preston, Lancs, left £6,106 (£6,069 net).

PERSONALITIES

LORD BOYD ORR was recently elected resident of the Association of Scientific /orkers.

MR. OWEN PARRY, M.P.S., High Street, ortmadoc, Carnarvons, has been installed esident of Portmadoc Rotary Club.

Mr. A. Aldington, M.P.S., the new esident of the North London Pharmaceu-

tical Association. and chairman, North Metropoli-Branch of the Pharmaceutical Society, is secretary of the local Branch National the Pharmaceutical Union. and member of the National Council of the Photographic Dealers' Associa-In business tion. on his own account Seven Sisters in

bad, South Tottenham, London, N.15, use 1935, he is also a director of a mber of pharmacies in the London area. ter qualifying in 1924 from the Manester College of Pharmacy Mr. Aldingare rejoined Squire & Co. (Birmingham), d., at whose Ashton-on-Ribble branch had been apprenticed, and was later unsferred to London, serving as a manaruntil 1932. In that year he took over business in Tufnell Park, London, moving 1935 to his present premises. A keen otographer, Mr. Aldington is an Associ-

of the Royal Photographic Society, d this year's president of the Tottenham mera Club. He has been elected founr-president of the newly formed Rotary ub of Harringay.

Mr. G. D. M. LAVIN has succeeded Mr. Wilkinson on the Potters Bar, Friern rnet, Southgate and Wood Green Area ealth Committee.

MR. JOHN DORIS, M.P.S.N.I., Was rerned to the Downpatrick urban district uncil in recent local government elecns in Northern Ireland.

MR. A. R. CROSS, M.P.S. (chairman, iddlesex Pharmaceutical Committee), s been appointed to the Middlesex unty Health Committee as a representate of the Enfield and Edmonton Area alth Committee.

DR. C. H. Best (co-discoverer of insulin and now director of the Banting and Best Department of Medical Research, University of Toronto, Canada), has received the honorary degree of doctor of laws of Dalhousie University, Halifax, Nova Scotia.

PRESENTATIONS were made by S. Maw, Son & Sons, Ltd., at a ceremony in London recently (see p. 856) to Messrs. H. W. Jacob, C. F. Mote, and T. Reid, representatives of the company, who are retiring. They have served with the company for fifty-four, forty-eight and twenty-five years respectively.

MR. H. S. FENTON, M.P.S., the newly appointed chairman of the Wimbledon Pharmacists' Association, is a founder member of the organisation. Mr. Fenton qualified in 1920 from the College of the Pharmaceutical Society, and after experience with Mr. Frank Browne, Hampstead, London, and in the Plough Court, London, branch of Allen & Hanburys, Ltd., he opened his present pharmacy at 14 Worple Road, Wimbledon, London, S.W.19.

MR. G. C. OSBORN, M.P.S., who has been re-elected chairman of the Slough Branch of the Pharmaceutical Society (founded in 1945 under the chairmanship of Mr. H. P. Elliot, M.P.S.), has been manager of the Windsor Branch of Savory & Moore, Ltd., since 1939. Mr. Osborn qualified in 1935 after an apprenticeship with Mr. R. P. Bristow, M.P.S., High Wycombe, his native town. He is a member of the Berkshire Pharmaceutical Committee.

Mr. Edwin G. Richardson, M.P.S., the newly appointed president of the Durham Branch of the Pharmaceutical Society, is the secretary and a director (with two qualified brothers) of Richardson Bros. (Chemists), Ltd.—a company with three shops in co. Durham. Mr. Richardson shops in co. Durham. Mr. Richardson commenced his business career in the Midland Bank, Ltd. After serving in the 1914-18 war he entered pharmacy and qualified in 1922. He then went into partnership with his elder brother (now managing director of the company). became an Associate of the Royal College of Organists in 1928, and has taken an active interest in local musical affairs, including the direction of operatic societies and various other musical functions. He was master of Rowlandson Masonic Lodge 3360, 1946-47.

TRADE NOTES

Sole Agency.—Ulster Pharmaceuticals, Ltd., have been appointed sole agents in Northern Ireland for the products of Thornton & Ross, Ltd., Linthwaite, Huddersfield.

New Pan Film.—Inquiries concerning Grafton panchromatic film, a film with a new base and new emulsion, available in 20 and 127 sizes, should be sent to Jones & Bailey, Ltd., 66 Brewery Road, London, W.7.

Available under N.H.S.—Menley & James, Ltd., 123 Coldharbour Lane, Camberwell, London, S.E.5, announce that under a recent ruling by the Ministry of Health, Benzedrine inhaler may be freely prescribed as a drug under the National Health Service.

Price List.—A price list of the products of Optrex, Ltd., and associated companies has been prepared by the sales distributors, Keldon, Ltd., Perivale, Middlesex, and is being issued to chemists throughout the British Isles by the companies' representatives.

Price Guarantee. — Richard Hudnut, Ltd., Power Road, London, W.4, have issued to all stockists of Richard Hudnut home permanent-wave sets an assurance that no change in price is at present contemplated. If any reduction is made at a later date the company will see that retailers suffer no loss on stocks held.

Transparent-bag Packs.—F. W. Crookes & Son, Ltd., Morpeth Street, Rotherham, Yorks, state that they have recently installed latest type of machinery for the making of transparent bags. The company's capacity is now three-quarters of a million bags per week, either plain or printed, in various sizes.

Calamine Cream in Tube.—The Crown Capsule Co., Ltd., Campbell Street, Helensburgh, Scotland, have introduced Alan's calamine skin cream packed in a cream and red printed collapsible tube and carton, in 3-doz. display outers. All inquiries should be sent to the company's London office at 84 Upper Richmond Road, London, S.W.15.

Products Guide.—Ciba Laboratories, Ltd., Horsham, Sussex, have issued a sixtypage "Pharmacists' Guide," a concise book of reference to the company's products. Information is given as to composition, indications and dosage for each preparation, and a therapeutic index is included. Copies are available on request to all pharmacists and pharmacy students.

Prices Reduced. — Pharmaceutical Specialities (May & Baker), Ltd., Dagenham, Essex, announce reduced prices for Sulphatriad compound sulphonamide tablets and sulphadiazine, M. & B., operative from July 4. Chemists are being given the benefit of the reduction on all orders received at Dagenham on June 20 and subsequently.

Hair Beauty Contest.—£2,000 in cash prizes and gifts are offered by Ashe Laboratories, Ltd., 120 Victoria Street, Westminster, London, S.W.1, in an all-Britain hair-beauty contest for girls using Bandbox preparations. The contest is to be featured at ballrooms in the main cities of England, Scotland, Wales and Northern Ireland, and the finals are being staged at the Locarno ballroom, Streatham, London, S.W.2, on August 12.

New Curarising Agent. — Burroughs Wellcome & Co., 183 Euston Road, London, N.W.1, announce that they have ample stocks of Syncurine brand decamethonium iodide curarising agent (C10), The company's product is issued in ampoules containing 5 mgm. in 2.5 c.c. (boxes of six and 25). The antidote, Wellcome brand injection of C5 (pentamethonium bromide), is also available in ampoules containing 40 mgm. in 2 c.c. (boxes of six).

Mercantile Year Book. — Now in its fifth-ninth year of publication, the Mercantile Year Book and Directory of Exporters issued by Lindley-Jones and Brother, Ltd., 52 Bishopsgate, London, E.C.2, is a cloth-bound volume of 1212 pages. It includes lists of export merchants in London and environs, and of provincial centres, lists of overseas buyers, classified list of goods exported, and a "whereto-buy" section. Copies are available from the publishers at 26s. each, post-free.

Penicillin Intramammary Injection.— Evans Medical Supplies, Ltd., are offering penicillin intramammary injection, containing 100,000 units of penicillin calcium salt in a non-irritant oil wax base, in collapsible tubes with nozzle. The tubes are packed in boxes of sixteen and 144. Special prices for quantities will be quoted on request to the Home Veterinary Department of the company at Speke, Liverpool 19, or 50 Bartholomew Close, London, E.C.1. Literature is also available.

The Year's Photography.—Orders are being accepted by the Publications Manager, Royal Photographic Society, for "The Year's Photography," the only printed record of the annual exhibition of the Society. The book is both inexpensive and the most indispensable of the photographic annuals for the photographer interested in exhibitions. To photographic dealers the books, in paper or cloth covers, are supplied at the usual trade discount. Orders, with cash, should be received well pefore publication date (October 1).

New Items for the Home Market .-Goya, Ltd., 161 New Bond Street, London. W.1, announce that adequate supplies of Aqua Manda, now packed in 2-oz. and 4-oz. bottles, have become available on the nome market. A summer advertising campaign is being carried out in the national vomen's journals. Messrs. Goya are also ntroducing to the home market a range of oilet soaps previously available only for The soaps are stated to lather xport. vell in hard water and to be economical nd lasting; they are in four fragrances: Pardenia, rose geranium, blue moss and ellow gorse. A showcard is in course of reparation.

Works Closings. — C. J. HEWLETT & ON, LTD., 35 Charlotte Road, London, C.2, will be closed for stocktaking from Vednesday June 29 to Friday July 1, inlusive. An emergency service to meet precription needs will be in operation and ne company's medical specialities may be btained from William Martindale, Bruton treet, or John Bell & Croyden, 50 Wignore Street, London, W.I. Factory and ffices will reopen on July 4 for normal usiness.—The works of Thornton & OSS, LTD., Linthwaite, Huddersfield, will c closed for annual holidays from Friday fternoon, August 5 to Monday morning, ugust 15.

Brush Trade Directory. — The 1940 lition of the Directory of the Brush and llied Trades (the second edition of the ork and the only one of its kind in the orld) is now available from the pubshers, Wheatland Journals, Ltd., 336 Kilurn High Road, London, N.W.6, at a rice of 12s. 6d. to subscribers to the onthly journal, "Brushes," 17s. 6d. to pn-subscribers. Buyers of shaving, tooth dental, and toilet brushes this year and the classified section of special interest.

New Packs.—J. C. & J. FIELD, LTD., 123 Broadway, Wimbledon, London, S.W.19, are now issuing their Field-Day brushless shave and Lathex shave cream (both nationally advertised lines) in glass jars of new design. The jars have horizontal ribs both to present a pleasing ap-

pearance and to facilitate holding the jar when the fingers are wet. The Field-Day pack has an orange cap with an orange, black and white label; the Lathex pack has a light-blue cap with a label in light and dark-blues and white.—H. R. NAPP, LTD., 3 Clements Inn, London, W.C.2, have introduced an additional twelve-tablet pack of Dyspastol tablets in "catch-cover" outer. Each tablet is individually presented in a transparent tear-off strip.—Thompson & Capper Wholesale, Ltd., Speke Hall Road, Liverpool, 19, are issuing Mothak powder in a new and attractive sprinkler-topped container and at a new price, details of which may be obtained from the company.

Proprietary Articles Trade Association

Additional Sizes in Protected List (Part 1).— Allied Laboratories, Ltd., Somnotil 35's, 33s. doz., tax 33\frac{1}{2} per cent., inclusive retail price 5s. Curacho Co., Veterinary Curacho embrocation,

Curacho Co., Veterinary Curacho embrocation, ½-gall. 17s. 7d. each, tax 33½ per cent., i.r.p. 29s. 3d.; 1 gall., 35s. 2d. each, tax 33½ per cent., i.r.p. 58s. 6d.

Fellows Medical Manufacturing Co., Ltd. (distributors, Fassett & Johnson, Ltd.), Compound syrup of hypophosphites, Fellows, 6-oz., 36s. doz., tax 33\(\frac{1}{2}\) per cent., i.r.p. 5s.

Alterations to List (Part 1).—Evans Medical Supplies, Ltd., E.D.P. (Evans dermal powder), 15s. doz., tax 33\frac{1}{2} per cent., i.r.p. 2s. 3d.

NEW COMPANIES

MURY (ENGLAND), LTD. (P.C.).—Capital £25,000. To carry on the business of manufacturers, distillers, refiners of perfumes, essences, powders, dyes, soaps, etc. First directors are not named. Secretary: A. W. Lowe, 31 Dale Street, Liverpool, 2.

HUTTONS OF SCARBOROUGH, LTD. (P.C.).—Capital £100. To carry on the business of multiple store proprietors, dealers in drugs and chemicals, etc. First directors are to be appointed. R.O.: Meeting house Lane, Bank Street, Sheffield.

A. SWINTON, LTD. (P.C.).—Capital £1,000. To acquire the business of a chemist and druggist, now carried on by Alice Swinton at 7 Front Street, Monkseaton, Northumberland. Arthur C. Brown, M.P.S., director.

D. C. DAVIES & Co., LTD. (P.C.).—Capital £2,000. To carry on the business of chemists, etc. Reginald F. Naunton, David C. Davies, M.P.S., Cyril A. Chadwick and James A. Butcher, directors. R.O.: High Street, Lakenheath, Suffolk.

F. PICKARD, LTD. (P.C.).—Capital £6,000. To acquire the business of a pharmaceutical chemist, etc., carried on by Nancy Pickard, at 49 Queen Street, Morley. Nancy Pickard and Robert Cooper, M.P.S., directors.

Joseph Dodsworth, Ltd. (P.C.)—Capital £4,000. To acquire the business of a chemist and optician carried on by John Nuttall at Rochdale. Henry Bell and Joseph Dodsworth, directors. R.O.: 251 Rooley Moor Road, Rochdale.

K.E. Trading Co., Ltd. (P.C.).—Capital £100. To carry on the business of manufacturers, exporters and importers of drugs and medicines, disinfectants, etc. Vivian H. Frank, director. R.O.: 6 Drapers' Gardens, E.C.2.

J. W. Jones (Chemists), Ltd. (P.C.).—Capital £2,000. To carry on the business of manufacturing, pharmaceutical and general chemists, etc. John W. Jones, Frederick W. King and Catherine D. King, directors. R.O.: 42 Astwood Road, Worcester.

DISPENSING & SURGICAL Co. (BELFAST), LTD. (P.C.).—Registered in Belfast. Capital £500. To carry on the business of chemists and druggists at B Clonard Street, Belfast. First directors are not named. Sean Boylan, 4 Harrogate Street, Belfast, subscriber.

Persomnia, Ltd. (P.C.).—Capital £1,000. To carry on the business of manufacturers, exporters and importers of and dealers in pharmaceutical, medicinal, chemical, industrial and other preparations and articles, etc. Stephen P. Rety, LL.D., and Stanley W. Goody, directors. R.O.: 2 The Green, Richmond, Surrey.

Modern Packages (Finance), Ltd. (P.C.).—Capital £100. To finance the container and packing industry in all its branches and to carry on business as tin box printers, manufacturers and suppliers of containers, etc. Alexander F. Jackson, and William H. Snow, directors. R.O.: 52 Leadenhall Street, London, E.C.3.

C. H. RYDER, LTD. (P.C.).—Capital £2,000. To acquire the business of a chemist and druggist as

carried on by the late John Dunbar, at 110 Markhouse Road, London, E.17. Cecil H. Ryder Gladys M. Ryder, William O. Mitchell, M.P.S., an Alfred J. Hooper, directors. R.O.: 110 Mark house Road, London, E.17.

Company News

TIMOTHY WHITES & TAYLORS, LTD.—Profit fo 1948 amounts to £331,867, after providing £501,75 for taxation, compared with £377,213 in th previous year, when the tax charge was £744,002 A final dividend of 20 per cent. on the ordinar shares maintains the distribution for the year a 32½ per cent.

LAPORTE CHEMICALS, LTD.—Net profit for thyear to March 31 amounts to £396,467 agains £259,970 in the previous year. Allocations an made to obsolescence reserve of £45,000, compared with £12,000, and to general reserve of £30,000, against £10,000. A final dividend of ordinary stock is recommended of 12½ per cent., les tax, maintaining the total for the year at 17½ per cent.

Boots Pure Drug Co., Ltd.—Net profits of the Boots group for the year ended March 31 amoun to £1,070,434 (against £948,401) after providing £1,227,500 (£1,084,000) for taxation. Net profit of Boots Pure Drug Co., Ltd., for the year amounts to £627,662 (£679,428) after providing £612,50. (£562,650) for taxation. These profits are before transferring to profit and loss account £100,000 from reserve for fall in value of stock-in-trade, being part of the loss incurred through reductions in purchase tax in the Budget of 1948. The directors recommend payment of a final dividend on the ordinary shares of 20 per cent. (the same), less tax, maintaining the total dividend for the year at 40 per cent.

Voluntary Liquidation.—Barnes, Gowland & Co., Ltd., wholesalers of chemists' sundries, 80B Dean Street, London, W.I. A statement of affairs presented recently disclosed liabilities amounting to £2,015. After allowing £462 for preferential claims there were net assets of £849, or a deficiency of £1,166. The company was incorporated in November, 1945, with a nominal capital of £10,000, of which £500 had been issued. Mr. C. E. M. Emmerson, C.A., of Josolyne, Miles, Page & Co., 28 King Street, Cheapside, London, E.C., has been appointed liquidator.

BUSINESS CHANGES

Mr. C. O. GREENE, L.P.S.I., has acquired the pharmacy business at the Medical Hall, O'Curry Street, Kilkee, co. Clare.

MILLERS, LTD., merchants, Colombo, Ceylon, have transferred their London buying offices to 10 Ashley Place, Westminster, London, S.W.1 (Telephone: Victoria 1858/59).

MR. HARRY GIBBS (formerly manager of the pharmaceutical section of the Cork Chemical & Drug Co., Ltd., Cork) has joined the sales staff of M. G. Baynes & Co., Ltd., wholesale chemists, 23 East Essex Street, Dublin.

TENURE AND RENTS INTERIM REPORT ON

HE Leasehold Committee appointed in ecember 1948 has issued its Interim Report on Tenure and Rents of Business emises (H.M. Stationery Office, price nepence). The report summarises the esent legal position and reviews overseas ethods of dealing with the problem bere making the following general recomendations:-

The immediate need is to secure the ting tenants of business premises against e risk of unreasonable disturbance by eir landlords until increased availability accommodation restores in some degree

uality of bargaining power.

2. The only practical solution is to give e sitting tenant of business premises some curity of tenure beyond that afforded by e terms of his original tenancy. volves giving some Tribunal power to the rent, conditions and term of the

tended tenancy.

3. The method used in the Rent Re-ictions Acts is inappropriate to business emises.

4. Attention should be concentrated on e position of sitting tenants, who should treated as having a right to renewal. introl of rents of business premises genally is not recommended, nor is it prosed to accord rights of renewal to subnants.

5. The measure suggested, though not ppropriate as long-term legislation, is ofined to the period which has dictated,

山山

eag) Vins

85 b

00

fice"

Tical

need. The Committee recommends, however, at the Tribunal should be debarred from enting renewal if the landlord proves, her that the tenant is an undesirable ant; or that the premises are reasonably quired for a scheme of demolition or reilding, or for a scheme of substantial nodelling or substantial physical re-velopment. The scheme would extend all premises used for business, trade, inufacturing, or professional purposes, ether profitmaking or non-profitmaking. l occupying tenants of such premises uld be eligible for the benefits, irrespece of the length of their tenancies or length of their actual occupation of

Unless otherwise agreed, the terms of renewal would be fixed by the Trinal, the rent being fixed at such a sum the Tribunal thinks reasonable for re-

newal to a sitting tenant, having regard to the general level of rental values for comparable premises in the locality, and to the practice of a good landlord in according preferential terms to a sitting tenant, and taking into account the other terms of the proposed lease, but not any increase in the rental value of the premises due either to goodwill created by the tenant or his predecessor, or to any improvements carried out by the tenant or his predecessors otherwise than in meeting obligations owed to the landlord or his predecessors in title. The Tribunal would not be allowed to require the payment of a premium except in special circumstances.

A weekly, monthly, or quarterly tenant, who is not prepared to take a lease, should be given a non-assignable tenancy for three years, during which period the rent should not be reviewed The notice of termination required from such a tenant should be of reasonable duration (e.g., three months for a monthly tenant). Such an interest should be renewable at the discretion of the Tribunal at the end of three

years.

SCOTTISH EXECUTIVE

At the annual meeting of the Scottish Department of the Pharmaceutical Society held in Edinburgh on June 15, the result of the election to fill eighteen vacancies on the Scottish Executive was presented. Of eighty members who were nominated, forty-one had accepted nomination. total of 842 votes was recorded; the number of voting papers issued was 2,960. The successful candidates were:-

RESALE PRICE MAINTENANCE REPORT

Statement by Secretary of the Proprietary Articles Trade Association

SPEAKING, as secretary of the P.A.T.A., to meetings of pharmaceutical associations I have in recent months expressed the view that the future operation of the pricemaintenance system in pharmacy and the drug trade might be dependent on two factors: (1) the outcome of the deliberations of the Resale Price Maintenance Committee, then sitting; and (2) the activities of the Monopolies Commission. In connection with the Resale Price Maintenance Committee's Inquiry, I mentioned that the P.A.T.A. had submitted evidence designed to show that the continuance of its system is essential to the well-being of pharmacy, and that if the system went the pharmacist might be unable to perform satisfactorily and without financial anxiety the professional services he renders to the public.

Threat to Pharmacy's Interests

The Committee's Report, with its conclusions and recommendations, has been issued and has received wide publicity. These recommendations, and the statement outlining the Government's policy in regard to them, made by the President of the Board of Trade on the day the Report was published, constitute, in my opinion, as serious a threat to the trading interests of pharmacy as anything that has happened in the past fifty years.

No useful purpose would be served in devoting space to critical examination of the premises, as set out in the body of the Report, on which the Committee bases its recommendations, although those who are not uninformed as to the detailed evidence submitted by a number of witnesses might have much to say on that subject. It is. however, important to recall that nearly twenty years ago (when price-cutting was widespread and acute) the question of resale price maintenance was examined by the Restraint of Trade Committee, under the chairmanship of the present Lord Greene-at that time regarded as the most eminent member of the Chancery Bar. The Greene Committee found that no sufficient case had been made out for interfering with the right of a manufacturer to sell his goods upon conditions that permit him to name the terms on which such goods shall be resold. It also felt that there was no ground "for interference with the Proprietary Articles Trade Association o other such bodies if they forbid their mem bers to supply persons who have broken their contract or who have otherwise en gaged in price-cutting." This war coupled with a warning that careful watch should be kept on tendencies towards monopolis tic combinations that might harm the pub-The Lloyd Jacob Committee were deputed to examine the question of resale price maintenance "in the light of exist ing circumstances," and they claim to have reached their conclusion in that light, Ir this respect their findings will not be accepted by many as conclusive or convincing, for it may well be contended that the existing circumstances" of today, as referred to in the Report, provide no sound basis for the Committee's reversal of the findings of the Greene Committee in 1931

The Lloyd Jacob Committee obviously regard the Greene Report as out of date. They do not recommend that price maintenance by individual manufacturers shall be made entirely illegal, but they and the President of the Board of Trade make it clear that the limited measure of price maintenance—operated by manufacturers individually—that may be permitted must not include prohibition of dividend or discount systems employed by the co-operative societies and others, must not utilise "sanctions," and must recognise the right of traders who employ what are termed "low-cost methods of distribution" to sell price-maintained goods at reduced prices. If these powers, limited though they be, are to be allowed to the individual manufacturer, why in the interests of "maximum economy and efficiency" (a factor which should appeal to Mr. Wilson) should they not also be available to those manufacturers who desire to operate price maintenance collectively and, therefore, economically.

I D

PAT

Effect on P.A.T.A.

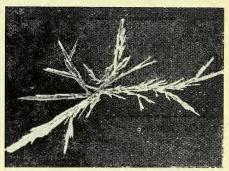

In the absence of any such arrangement, which in any case would eliminate what is regarded as an essential feature of P.A.T.A. policy—namely the observance of uniform retail prices by all distributors— the effect on the P.A.T.A. system should be the Committee's recommendations and Mr. Wilson's statement of Government policy regarding them be implemented, would ap-

ear to be prohibition of (a) the existing rocedure whereby all P.A.T.A. manufacirers and wholesalers enforce the procted prices of the products of any par-cular manufacturer or manufacturers by ithholding supplies of all P.A.T.A. oods from a trader who is placed on the op list; (b) the compilation or use of "stop list" or of the imposition of fines penalties for breach of resale condions, and (c) the taking of any action gainst co-operative societies or other aders who allow dividend or rebate on A.T.A. goods, or against "self-service" lops selling such goods at less than the xed retail prices. If this threat to the .A.T.A. is implemented, either by legisation or (as is quite possible) by means f the Monopolies Commission, the outook for the Association's members, and for etail chemists in particular, will be bleak ideed. It must be realised that without system of collective enforcement there an be no assurance that the "fixed" rices which a chemist observes will not e undercut by his competitors and, judgig by past experience, once the cutting arts, however small the initial reductions lay be, inevitably there will follow more abstantial "cuts" on a larger range of cods and by a wider circle of traders ach anxious to go one better-not in the iterests of the consumer but for the purose of securing the latter's custom for ther and more profitable commodities. part from financial considerations, this ate of affairs would inevitably be a ource of perpetual worry to the pharmast, and could not have other than harmall effects on his professional efficiency. or manufacturers and wholesalers the osition may prove to be equally serious. ew of the former are familiar with the onditions which led the first body of nanufacturers-in their own interests and hose of the distributors of their products to join the P.A.T.A. in its early days. The present strength of the Manufacturers' ection is sufficient evidence of appreciaion on the part of its members of the dvantages of the system of collective price naintenance which they at present enjoy. Vholesalers may be reminded that in pre-A.T.A. days cutting was as keen in the holesale as in the retail trade.

So far as pharmacy and the drug trade re concerned, the withdrawal of the benecent system of price maintenance exerised by the P.A.T.A. for more than fifty ears would most likely bring about a return to the demoralising conditions of price-cutting that led the late Sir W. S. Glyn-Jones to seek and secure the coperation of the three sections of the trade in founding his "Anti-cutting" Association—the P.A.T.A. The Council of the P.A.T.A. is fully alive to the dangers of the position, and is confident that the Association's members who have benefited so greatly (and benefited without prejudice to the public interest) from the work of the P.A.T.A. will give their utmost support to the efforts that will be made to prevent the realisation of the threat

STANDARDISED LIVER

The announcement is made by Glaxo Laboratories, Ltd., Greenford, Middlesex, that their liver extract is standardised to contain the equivalent of 12 microgm. of the anti-anæmic factor (vitamin B_{12}). That amount is understood to be ample to produce optimum response in blood

CRYSTALS OF VITAMIN B12

regeneration over a period of fourteen days in uncomplicated cases of severe pernicious anæmia in relapse. Standardisation in terms of the precise weight of anti-anæmic factor is achieved by the cup-plate method of microbiological assay, a modification developed in the Glaxo laboratories and based on the knowledge that a specific micro-organism (Lactobacillus lactis of Dorner) requires the anti-anæmic factor for its growth. The growth response of the micro-organism to a specific amount of Examen can be measured and compared with the standard response produced by the pure crystalline substance. The standard of reference was made possible by the simultaneous isolation by Britain and the U.S. in 1948 of the pure vitamin B12.

GADGETS FROM A HOSPITAL PHARMACY

A DEMONSTRATION of "gadgets" was given at a recent meeting of the London Branch of the Guild of Public Pharmacists. Several from the pharmaceutical department of University College Hospital, Lon-

don, are illustrated below.

The first (fig. 1) is a Bunsen burner adapted for sealing ampoules. To a standard burner a brass angle-piece has been screwed so that the final section of the barrel is horizontal. Through a hole bored at the bend is soldered a narrow gauge metal tube that terminates in a brass nip-

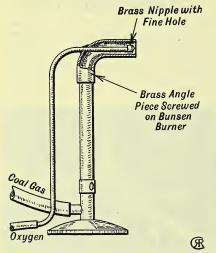

Fig. 1. Bunsen burner adapted for ampoule sealing.

ple with a fine hole. The external portion of the narrow tube is bent so that it may conveniently be connected to a supply of oxygen. The burner has a normal sup-ply of coal gas. With the oxygen supply carefully adjusted, the burner gives a compact flame that will seal ampoules evenly, leaving no weak spots of thin glass. It is claimed to be quicker and more efficient in use than the popular type of sealer using twin batswing burners.

The second (fig. 2) is a tin container for stock tablets made to the hospital's specifications by the Metal Box Co., Ltd. It is about 6 in, high. The lid is divided into two, the front half being fixed and the rear half hinged at the back to form a tray on to which the tablets may be shaken before being counted into the final containers. On the front edge is a handle

and a slot for a label card. Such containers make the optimum use of limited shelf space and are, of course, unbreak-

Fig. 3 shows one solution to the prob-lem of label storage. The rack is stocked with printed gum-backed labels in the

form of perforated rolls (like deckchair tickets), made by Auto Tickets, Ltd., Birkenhead.

The ampoule cutter shown in fig. 4 consists essentially of a nichrome wire looped tween two porcelain insulators. The wire is heated by a 2.5 volt current at 10 amps, produced by the stepdown transformer Uncut shown. ampoules a r e rotated along the wire, so that a ring of glass is softened,

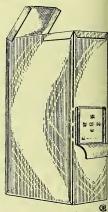

Fig 2. Tin container for tablets.

and with gentle pressure the top is cleanly severed. An advantage claimed for the device is that it entirely eliminates the risk to the operator of cuts from glass splinters.

Fig. 5 shows a piece of apparatus for aseptic transference (used at University

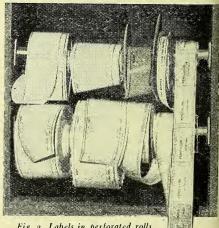

Fig. 3. Labels in perforated rolls.

college Hospital mainly for streptomycin blutions). The solution is prepared in continuous A. Negative pressure is applied at with stockcock D closed, and the solution asses from A through the sinter-glass filter K into the conical flask E. The air replacting the solution in A must pass through

ig. 5. Apparatus for aseptic transference. Inset: Electrical ampoule cutter.

the sinter glass airfilter at F. When E is full, stopcock D is opened and G disconnected. Positive air pressure is then applied at B (the air passing through filter at C), and the solution flows through the hypodermic needle H (which has a protective covering) into the final ampoules. The positive air pressure is not sufficient to cause the solution to pass back through the filter K.

CHLORAMPHENICOL IN TYPHOID FEVER

RIALS using Chloromycetin (chlorampheniol) in a recent outbreak of typhoid fever t Crowthorne, Berks, are described in a reliminary communication by Bradley Senior Medical Officer, Ministry of Iealth) in the "Lancet" (May 21, p. 869).

Clinical Trials

Twenty-one patients took part in the rials, ten patients receiving the drug. Two lderly patients died soon after admission 5 hospital, one being in the treated group, nd one in the control. Of the remainder, ine treated patients showed "obvious igns" of resolution within forty-eight ours (after 8 gm, of the drug had been dministered), while seven were apyrexial by the third day, and the other two by the ourth and fifth days respectively. In the intreated cases the disease ran its usual

The drug had a "dramatic" effect in relieving the headache of typhoid. Murgatroyd ("British Medical Journal," May 14, p. 851), reporting on a case of typhoid fever treated with chloramphenicol (4 gm, initially followed by 0.25 gm, twohourly, to a total of 22.75 gm.), found that positive stool cultures, and relapses with positive blood cultures might occur after treatment. A dose of 30 mgm. per kilo of body weight (i.e. three times the curative dose in the acute disease) was found by Rumball and colleague (ibid., May 28, p. 943) to fail to eliminate the organism from a chronic fæcal typhoid carrier. During treatment, however, the patient's serum inhibited the growth of the isolated organism. The workers recommend further trials on the use of the drug in treating carriers.

eem fit to the Committee," has recently
een fit to examine the National Health
Service estimates, and its report (see p.
348) has appeared almost simultaneously
with the completion of twelve months'
pperation of the Service. That fact makes
easy a comparison of the Committee's findngs on pharmaceutical aspects of N.H.S.
with the experience of pharmacists themselves, a number of whom have contributed
their views in a symposium in this issue,

The Committee's examinations revealed no point on which pharmacists are deserving of criticism, though there is an unfortunately-worded reference in its Summary of Conclusions and Recommendations to the "abuse of the pharmaceutical services which is going on at the present time." The remark, when traced to the Report, is found to refer to the issue of excessive and wasteful prescriptions, a matter over which pharmacists have no control -unless, as one member of the Committee appeared to think desirable, chemist contractors are constituted a sort of expert Gestapo to draw attention to cases of excessive prescribing. To the credit of pharmacists it is "a little difficult," in the words of the Ministry's Accountant-General, "to get chemists to criticise doctors' prescriptions," and most people would agree that to bring about a change in that attitude would be undesirable.

When the Select Committee came to the matter of chemists' remuneration. question was pointedly asked "Are there any reports of excessive earnings?" There was no direct negative, but the details that were given of the way in which chemists' remuneration is made up clearly showed that excessive earnings do not occur under the scheme. Indeed, it is hard to see how they could be possible. The evidence substantiates the opinion of Mr. G. H. M. Graham (who, by reason of the prominent part he played in the Working Party on dispensing costs, is in a possibly unique position to speak with authority on the subject) that chemists are no worse off under N.H.S., but equally are no better Mr. F. C. Wilson put the same thing a little differently when he said that, although the basis of payment for N.H.S. represents an improvement over conditions under N.H.I., the improvement is offset by the greatly extended "credit" nature of the remuneration at the present time. The Committee did not pursue its inquiries into chemists' remuneration to a conclusion. because "at the time of the inquiry the scales were the subject of negotiation between the Departments and representatives of the profession." The terms on which the services are to be supplied have not yet, as the Report states, been settled on a permanent basis, and that cuts both ways. From the Ministry's side the aim may be to find ways of effecting further economies, but what chemists have still to find out is the effect on counter sales. months may elapse before that can be finally judged. Meanwhile the series of specially written articles in this issue will help all contractors to carry out the same sort of interim stocktaking for themselves and to be ready to stand firm against any further attempt to lower their present standards (for we regard as such the cut in container allowance now accepted by a majority of contractors in the plebiscite in preference to a return of the deposit system), or even, should the facts warrant it, to claim further compensation for lost counter trade. In due course those figures will have to be examined.

The immediate question is one of the date rather than the amount of payment. Here the prospects are mixed. one hand there is the decision to increase the advance payment from 80 per cent, to go per cent, of the previous month's average. On the other, the situation must be faced that the gap between the pharmacists' demand for full pricing and the Ministry's objective in running the pricing bureaux is likely to widen rather than close. The Ministry's Accountant-General has said "We are now examining with them [i.e., the chemists] the possibility of even more short cuts . . . As long as we get the right answer and get the money out quickly, that is the thing that matters." Everyone will agree on the need for prompt payment, though many will remain sceptical whether the "right answer" will be forthcoming by any other method than full pricing. Vigilance is necessary that such developments as the "bulk" prescription for institutions do not multiply and in doing so undermine the chemists' income. It seems that the negotiators are alive to this danger.

Jenner and the Conquest of Smallpox

A RECENT small outbreak of smallpox that caused two deaths in Britain following the arrival of a liner with a smallpox case on board, serves to underline the freedom this country has enjoyed from the disease in recent years. Most observers would agree that this immunity has been due largely to the protection given to the population by vaccination-a method elaborated at the end of the eighteenth century by Edward Jenner (see p. 853), the bicentenary of whose birth took place this year. Since 1935 the disease has not at any time been classified as endemic in this country, and no deaths occurred in England and Wales during the period 1939-43. Before Jenner's day, deaths due to smallpox are estimated to have been 3,000 per million (and about one-twelfth of all the deaths in England and Wales). In the peak year of the "Great Epidemic" of smallpox in Europe (1870-75), deaths in London, despite compulsory vaccination, still totalled 1,012 pt million of population. In other countrie however, where vaccination was not com pulsory, deaths were three or four time as numerous.

Vaccine lymph, which is now produce through the agency of animals (see p. 854 was for many years after Jenner's deatl produced by "arm to arm vaccination," the original strain of vaccinia being thu transmitted continuously through human beings. Negri, of Naples, began in 1842 to propagate the virus from one cow to another, and the practice spread to France in about 1866, to Brussels in 1868, and later to Berlin, Vienna, Rotterdam and other European capitals. "Arm to arm vaccination" remained in use in England until 1896, when a report of the Royal Commission on Vaccination advocated its cessation. Calves, which then came to be used, cannot transmit syphilis or leprosy, while additional safety may be obtained by using sheep (as at Lister Institute) which are immune to tuberculosis.

Though vaccine lymph has improved since Jenner's time, it remains basically similar to the product he used (and still contaminated with living bacteria). For that reason alone the work now being done at the Institute to find an uncontaminated (and stable) prophylactic material will, if successful, represent an important advance.

Security of Tenure

No one can really quarrel with the proposals put forward by the Leasehold Committee Report on Tenure and Rents of Business Premises (see p. 835) for providing security of tenure for tenants of trade and business premises. Any new rights that may be ultimately conferred by legislation on the lines of these proposals will still leave the tenant free to pursue such remedies as he may enjoy under the Landlord and Tenant Act, 1927. That Act has, in fact, failed to achieve its object. Tenants who are entitled in certain circumstances to the grant of a new lease or to compensation for goodwill, have found in practice that the establishment of any such claim is extremely difficult. In any case,

ne rights under the 1927 Act are limited a very narrow class of tenant. It is only ne retail trader who could possibly have claim, and then he could not succeed nless he could prove that goodwill has cen created by his or her predecessors' ading.

ommittee's Scheme

Under the scheme proposed by the ommittee, a very much wider class of enant will benefit. Wholesalers and manuacturers will be entitled to renewal of neir tenancies in the same way as retail aders. Thus renewals may be obtained if he scheme goes through, even for factories, r warehouses or premises used solely in onnection with wholesale businesses. enants of premises controlled by the Rent cts, however, will not be entitled to any enefit under the proposed scheme. A traer who has a lock-up shop and uses the pper parts of the premises as a residence ould come within this class of tenants if he rateable value of the premises did not xceed £100 in London, or £75 elsehere. It is proposed, however, to give uch controlled tenants a larger measure f security by making certain amendments f the Rent Acts themselves. Thus it is uggested that a landlord should not be ntitled to recover possession on the ground f alternative accommodation, unless he roves that alternative business accommolation is also available. And in cases vhere the landlord required possession for nimself the court in considering the quesion of greater hardship should also take nto account the loss of his business prenises that the tenant would suffer if he had to quit.

To deal now with the general proposal. The scheme is intended to be only a temporary one to meet the situation caused by the shortage of accommodation. Once that situation was eased and the sellers' market in property was no longer operative, the whole question could be reviewed. The principal object of the proposed scheme will be to provide security of tenure. There are no proposals with regard to the pegging of rents in general as there are under

the Rent Acts. Each tenant will automatically enjoy the prima facie right of having his tenancy renewed on application to the Tribunal if necessary, and on such application the Tribunal would determine which was the proper rent payable for the particular property. This rent would be the rent which a good landlord would require from a sitting tenant to whom preferential treatment was given. In fixing this rent the Tribunal would disregard any increase of value due to goodwill, or due to the execution of improvement carried out voluntarily and not in pursuance of any legal obligation.

Generally, renewals would be for a minimum period of three years and for a maximum period of seven years. Quarterly, monthly and weekly tenants would be granted a renewal for three years but without any right to assign the tenancy.

Upon the expiry of the renewed tenancy the tenant would be entitled to apply for a further renewal. This right to apply for a further renewal, however, would be limited to the tenant and to relatives taking an interest on the tenant's death. Accordingly, an assignee or a subtenant of a renewed tenancy would have no right to apply for a renewal. In order to claim a renewal the tenant would be required to serve notice of his claim on his landlord. The stringent rules of the Landlord and Tenant Act, 1927, with regard to service, would not, however, apply. If the tenancy is one which would expire automatically by effluxion of time, the notice has to be served merely in good time before the date when the tenancy is due to expire. If, on the other hand, the tenancy is determinable by notice to quit, the notice to quit will be invalid unless it is accompanied by a statement notifying the tenant of his rights under the scheme and the procedure that must be followed. If the notice to quit is in order, then the tenant, who will thus be fully apprised of his position, is required to serve his notice of claim by not later than the earlier of the two following dates, viz.: (a) the expiry of the tenancy, and (b) the expiry of a fortnight after the receipt of the notice to quit.

N.H.S.: AN "INTERIM" SUMMING-UP

By G. H. M. Graham (Chairman, 1948-49, of the National Pharmaceutical Union)

A LTHOUGH it is almost twelve months since the appointed day, under the National Health Service Act, and chemists should be able to review their position as contractors, it is still not possible, owing to delay in settle-

Mr. G. H. M. Graham

ment of accounts, to obtain an accurate picture. It will probably be Debefore a cember true analysis of first year's the work can be made. We should, nevertheless, be able to draw some broad conclusions from the figures that are now in our possession.

Speaking as a contractor, I would say we are no

worse off now than we were a year ago. I would also go so far as to say we are no better off. The terms we accepted were fair to both the Government and the contractor. The Ministry had gone to great pains to obtain sound statistical data prior to negotiating with the contrac-tors' representatives. Allowance was made for a falling-off in private dispensing. The only doubtful quantity was the amount of dispensing being done by dispensing doctors themselves for their private patients, which, under the new scheme, would come to the chemist. The Ministry computed that the average cost per prescription would be 29.5d. (assuming the global is, fee and 21d container charge). For the 78 million or so prescriptions dispensed between July 5 and December 31, 1948, I should say that the figure of 29.5d, is not more than 0.2d, out. It says much for the competency of the Ministry's experts that they calculated so accurately. It may well be, of course, that from January 1949 onwards the figure will rise by as much as twopence per prescription but it will drop again by 1.25d when the container allowance is cut.

Stock Increase

As I see it, larger and more varied stocks have been needed, particularly of "ethicals." As was foreseen, there has been a

tendency for doctors to order a large number of doses per bottle of mixture, and the demand for the larger sizes of lints, wool, gauze, etc., has been noticeable. has been a drop in retail sales (our figures show it to be 18 per cent.) but total turnover is slightly up (3 per cent.) and there is a slight increase in the percentage gross profit (3 per cent.). The increase in gross profit has been almost exactly offset by wage increases, so that the net profit to the proprietor is the same as in the pre-vious year. However, had it not been for N.H.S., total turnover would have been down (9 per cent.), and a lower percentage of gross profit would have obtained. Without any increase in wages, net profit would have been down (10 per cent.). Contractors, therefore, are no worse off, and not noticeably better off than they would have been without N.H.S., while staffs have benefited to the extent of the increased wages paid.

Staff Problem

Staffing remains a problem and, because of the shortage of locum tenentes, it may be found necessary for some contractors to close their establishments for seven to fourteen days as the only means of-getting a break from work this summer. The marriage factor of our qualified ladies must be taken into consideration now that so many girls are taking up pharmacy. In some instances pricing delays are imposing a burden on the younger contractors who have recently gone into business, but the fact that, from July, 90 per cent, of the contractor's own January 1949 prescription average will be paid on account, will go some way towards relieving the burden.

A PHARMACIST'S ANTHOLOGY

... Obstinately
He canalised his fervour, it was slow,
The task he set himself, but plotting points
On graph paper he felt the emerging curve
Like the first flutterings of an embryo
In somebody's first pregnancy; resembled
A pregnant woman too in that his logic
Yet made that hidden child the centre of the world
And almost a messiah; so that here
Even here over the shining test-tubes
The spirit of the alchemist still hovered
Hungry for magic, for the philosopher's stone.
From "The Kingdom," by Louis Macneice.

REMUNERATION UNDER N.H.S.

By F. C. Wilson (Secretary, Surrey Pharmaceutical Committee)

POR better or for worse! As a man takes a woman to be his wife, so today pharmacy is wedded to the State service. For better, perhaps, because at long last the pharmacist in retail practice is de facto the dispenser of the nation's

Mr. F. C. Wilson

medicines - for worse, perhaps, because, by large, the State is now the pharmacist's only customer for dispensing ser-These two conflicting elements naturally reflect themselves in any argument on remuneration, because the State, in becoming the sole employer of dispensing services, is in the position of

a "bulk buyer" when negotiating the terms upon which the service should be paid, while on the other hand the pharmacist is no longer able to make up on the "private" swings what he may lose on the State roundabout.

Hard-worked Pharmacists

In areas where the pharmacist did little or no private dispensing, it might be true to say (as did a writer in the New York "Saturday Evening Post") that the chemist is better off under the new service than he was under the old. But, if this be true and it may well be that such conditions rule over the greater part of England—there can be no doubt that he has to work much harder than he did before July 5, 1948. There can be no doubt that the pharmacist's remuneration under the National Health Service is more satisfactory than it was under the old N.H.I. system. The effect, however, on the net income of the individual proprietor pharmacist is not by any means so favourable as one might expect from fees which are approximately double those of the old service, because a much higher proportion of his income is derived from credit sales -upon which the credit is greatly extended. In fact, in few areas have chemists yet received settlement of their February accounts.

The net remuneration of a chemist contractor is further reduced by a general increase in remuneration which he in his turn has to pay to members of his staff. Salaries of assistant pharmacists and unqualified assistants have both risen recently by amounts which even a year or so ago would have been thought considerable. A further factor that has created concern in the mind of the contractor pharmacist is a change in the prescribing habits of the general practitioner. This has had the effect of greatly increasing the average ingredient cost per prescription. In the Surrey area, the average ingredient cost in January 1949 was 5d. per prescription more than it was in June Such tendencies not only tie up more and more of the pharmacist's capital in slow-moving high-priced medicaments, but at the same time saddle him with dead stock. Paragraph 15 of the Drug Tariff entitles a pharmacist to claim for ullage where a proprietary medicine is obtainable only in an original package, but there is no provision at present for payment for broken bulk in non-proprietary medicines, even though they may, of necessity, have to be purchased in quantities greater than are actually required to fill a particular prescription. Many chemists find themselves involved in losses on such drugs.

Sales over the Counter

It is, as yet, much too early to assess the effect of N.H.S. on general counter business. In some areas chemists report a considerable reduction in counter sales from July 5, 1948, in other areas the reduction is measurable by the reduction in private dispensing which has turned over to the N.H.S., while in still other places there has been little or no reduc-tion in counter sales. Until it is possible to obtain statistics of the general recession in trade over a wide field of distributive trades, and to compare them with pharmaceutical figures, it would be futile to attempt to measure the effect of N.H.S. on the general sale of medicines. To sum up, the contractor pharmacist is, I think, better off financially than he was prior to the introduction of N.H.S., but the amount of work involved and the extra worries are barely adequate compensation for the increased remuneration.

TWELVE MONTHS OF N.H.S. PRICING

By T. Heseltine (a member, Joint Pricing Committee for England, and chairman, Central N.H.S. (Contractors) Committee and Pricing Working Party)

HE pricing of prescriptions has been and still is, so far as chemist contractors are concerned, the most unsatisfactory part of the National Health Service contract. Since the coming into operation of the National Health Service

Mr. T. Heseltine

Act, the position has been little short of chaotic, and although the work of those responsible for pricing has been one of earnest endeavour, it must be recorded that little improvement is yet apparent.

What are the causes? Amongst many, the vast increase that has taken place in the numbers and com-

plexity of scripts; latterly the new method of pricing according to dosage; shortage of staff; and the complete unpreparedness of the majority of pricing bureaux, must take pride of place.

Who or what is to blame? The popular answer is, of course, the Ministry of Health. but the writer would ask contractors to apportion the blame and distribute it according to the facts. Almost twelve months prior to July 5, 1948, the superintendents of all pricing bureaux were instructed to augment their staffs by some 20 per cent. It has to be recorded that few, in fact, did increase their staffs to any great extent, partly be-cause of shortage of accommodation and machinery, partly through sheer inability to recruit staffs at the salaries offered, and partly because some superintendents failed to appreciate the magnitude of the task that was to confront them.

Improvements Effected

What has been done in an endeavour to improve pricing? The Ministry of Health has centralised the management of all thirteen bureaux in England in one committee known as the Joint Pricing Committee for England, a committee with full executive powers. Amongst the members of the Com-

mittee are representatives of various Executive Councils and four members representing the Contractors' Committee. The Joint Pricing Committee usually meets at one or other of the pricing bureaux in order to obtain a correct picture, on the spot, of the many and varied difficulties involved in the pricing of prescriptions. The Committee has demanded and obtained permission to augment staffs, to increase salaries considerably, and to improve the accommodation and efficiency of various bureaux. It has reallocated the prescriptions for pricing according to the staff and general efficiency of each bureaux.

Pricing Working Party

The Ministry has set up a Pricing Working Party consisting of four members of the Contractors' Committee, with Mr. H. Noble (secretary, National Pharmaceutical Union) and representatives of the Treasury and Ministry of Health. This Working Party has as its sole duty the acceleration of pricing and has examined in detail, in conjunction with the N.P.U. and Contractors' Committee, every suggested method with—on the contractors' part—"always the aim of pricing in full." Some 180 million prescriptions are estimated to have been dispensed during the first twelve months and, as is well known, many and varied methods of pricing have been tried. None, unfortunately, has proved satisfactory to the main body of the contractors. After a term of averaging, full pricing was demanded for the October 1948 prescriptions, but it soon became obvious that to price four weeks' scripts in four weeks was a physical impossibility. In fact, in the majority of pricing offices the time actually needed was twelve weeks and upwards. Realising this, the contractors' committee was again forced to accept a system of payment by averaging, with a proviso that each contractor should be paid 80 per cent. of his July average (with a minimum of 1s. 1od. per prescription) within three weeks of submission of his scripts; that all scripts value 2s. 6d. and upwards, plus all specials, plus one week's scripts of the under 2s. 6d. group, should be priced in full, the contractor being paid on his own average. That scheme also was found to be impracticable, and after "consultation"

(but not agreement) with representatives of the Contractors' Committee, the Ministry of Health, acting strictly within its constitutional powers under the Act, gave notice that all scripts with an ingredient value of 5s. and over, all "specials," and a minimum of 20 per cent. of the remainder, would be priced in full from June 1, 1949.

Time alone will enable the Joint Pricing Committee to discover whether this latest method will enable prompt and reasonably accurate payments to be made, but the contractors can be assured that the Ministry and the N.P.U. will continue to check the results and make adjustments accordingly.

It is the writer's considered opinion that the representatives of the Ministry, the Contractors' Committee, the Joint Pricing Committee and the Pricing Working Party are all equally desirous of discovering a method of pricing that will satisfy the demands of all concerned.

METROPOLITAN DISPENSING UNDER N.H.S.

By Stanley Robinson (secretary of the East Metropolitan Branch of the Pharmaceutical Society and president of the West Ham and District Association of Pharmacists)

A LMOST a year has elapsed since the "Appointed Day" and it is opportune for pharmacists to take stock and consider how the expectations, hopes and fears of the pharmacist in business, the employed pharmacist, the doctor and the general public have materialised.

Needs of the Area

In the vast population concentration of East London and Metropolitan Essex the types of chemists' businesses are of wide variety including large establishments in modern centre-of-the-town shopping centres, family businesses in good middleclass residential suburbs, and units in thickly populated industrial localities which had heavy dispensing practices under National Health Insurance. In all cases State dispensing appears to have approximately doubled, whilst private dispensing has virtually disappeared. The patient who still visits a consultant in Harley Street has, it seems, already learned that he can take the prescription to his own N.H.S. practitioner and have it copied on an E.C.10 form, and thus have it dispensed without cost to himself. Whilst, in a few businesses, it has been found necessary to expand the already existing dispensary and in one or two instances to install new ones, the majority of pharmacies in the area have been able to cope with the work without alteration of premises and with a minimum of extra equipment. The capital investment has only slightly increased due to having to stock a larger range of proprietaries and larger quantities than heretofore. In some districts, the practitioner who had been in the habit of supplying ready-compounded

mixtures supplied to him by certain drug houses has continued ordering these, and that has entailed having on one's shelves a new series of Winchesters, not familiar before N.H.S.

Counter sales have definitely fallen since July 1948, but whether this is due to the public not resorting so readily to self-medication or to a general recession in retail trading is a moot point. Certainly, in the middle-class dispensing business, there has been a notable decrease in the sale of high priced "ethical" proprietaries, either over the counter or by prescription, and it is obvious that many people are obtaining these under N.H.S. at an important saving to their pocket.

Taking everything into consideration, I feel the proprietor pharmacist in an average suburban business has had his income increased, the value of his capital augmented, and his leisure hardly curtailed with the advent of N.H.S. In the more industrial districts, the man who generally worked hard before finds he has to work harder still; his efforts are even less appreciated by his public, and N.H.S. is probably a mixed blessing.

Managerial Status

To the pharmacist employee and—more important—the pharmacist manager, the coming of N.H.S. has brought great responsibility. His problems are almost identical with those of the proprietor and, like him, he has in general gained financial benefit and security. Unfortunately, by reason of the omission from the Act of a permissive clause that would enable Executive Councils to give the pharmacist in control of a dispensing unit a part in the

contract, the pharmacist manager has gained nothing in professional status, while the division of Pharmaceutical Committees into employed and self-employed sections has not helped to unity in the profession. Attempts (for the purpose of ensuring rota dispensing services on half-holidays and Sundays) to persuade local authorities to present a blind eye to the provisions of the Shops Acts and Sunday Trading Acts are resented by certain employees. In the writer's opinion there is no need, in the large centres of population, for any infringement of the Acts in order to give adequate service.

Medical practitioners appear, in the main, to find satisfaction in being able to close down their dispensaries. Quite a few in this area now write prescriptions for their remaining "private" patients. In Ilford and West Ham, Saturday evening surgeries have virtually disappeared, and in most cases a Saturday evening after-

hours rota has proved futile, since not one script has been tendered.

The public appear, on the whole, to be satisfied, and to value N.H.S. as a monumental advancement in the social services of the nation. So long as there remains one unit in an area at which an urgent medicine can be procured at any time, whether from a resident pharmacist or from an all-night dispensary, there has been little complaint regarding service. Resentment is, however, often felt when obscure proprietaries are ordered and the patient cannot be satisfied immediately, and there is still room for the organisation of more depôts with stocks. It is important that all intelligence organisations such as police stations, town halls, citizens' advice bureaux and local newspapers should be provided with adequate and up-to-date information of dispensing units available on rota, and, even more important, for emergency dispensing,

HEALTH ESTIMATES UNDER SCRUTINY

The seventh report from the Select Committee on Estimates, issued recently, deals with the administration of the National Health Services. The Committee, one of whose functions is to suggest what economies, consistent with the policy of the Government, may be effected in the departmental estimates, heard evidence from Treasury, Ministry of Health, and Department of Health for Scotland officials, from the chairman of the London and Renfrewshire Executive Councils, from the Clerk to the Edinburgh Executive Council, etc.

"Surprisingly Little Friction"

In an introductory review of the scope of the National Health Service, the report points out that "any organisation to run the National Health Services had to undertake a scheme of great magnitude, and had no reliable precedents to guide it." In the circumstances, "it was gratifying to find from the evidence that, on the whole, the scheme was settling down with surprisingly little friction." However, the Committee came to the conclusion that it would not be profitable to inquire into the scales of payment for professional service under the N.H.S. Act, which, like the demand, had not yet reached a permanent level, and some of which were still the subject of negotiation. The Committee's comments in the other parts of the report are put forward with the reservation that it is as yet

too early to judge whether or not the National Health Services are being managed economically.

The estimated net total cost for 1949-50 £259,727,600. Of this amount, £40,700,000 is met by contributions from employers, employees and self-employed. The remaining eight-ninths is paid for out of taxation. Under the heading "Pharmaceutical Services," the report states that the estimates for pharmaceutical services (the totals are: England: £17,530,000; Wales, £1,470,000; Scotland: £1,800,000) were easier for the departments to frame than those for the dental or ophthalmic services, "because the remuneration of pharmacists had been the subject of a Working Party, whose conclusions assisted the Ministry in fixing payments. The main cause of the original estimate for 1948-49 (£11 millions in England against a revised estimate of £15 millions, with similar increases in Wales and Scotland) being too low was the unknown factor of the demand for the services. Partly by reason of the publicity the new Service received, and "in part also to patients taking the fullest advantage of the schemes to obtain such things as bandages and aspirin without payment which they did not do under the old which the scheme." A brief summary is given of the work of the pricing bureaux as "checks against the abuse of the Service," though it is recorded that one chairman of an

Executive Council expressed the opinion that there had not been the degree of scrutiny he considered essential. His remarks, however, involved no criticism of

chemist contractors, since he was referring to prescripfor items which, under the old N.H.I. scheme, would have been regarded as food rather than medi-The Committee recommends that the departments administering the Health Services should make such regulations as are practicable to prevent excessive or wasteful prescriptions, and that the schedules of medicines and appliances available under the Services should be reviewed from time to time

in the light of experience. No "ob-

vious major defects" were found in the administration, though there is considered to be scope for review of the detailed working of the Services, and of the remuneration and conditions of service of those engaged in providing services, and a need for public recognition that abuse of the facilities constitutes a grave threat to their maintenance and further expansion.

Administrative Arrangements

At the first day's hearing Sir William Douglas (permanent secretary, Ministry of Health) described the changes made within the Ministry to cope with the National Health Service. There had been a division, he said, into two, with two Deputy Secretaries, one concerned almost entirely with the new Service. There had been a substantial increase in personnel and a transformation of the organisation. In time one would hope that the burden at present on the Ministry would be diminished to some extent, but possibly by that time something else would have cropped up that would use the services of that particular staff in some other capacity. It would not be right to say that a view had yet been formed as to what the proper establishment should be. A lot of the additional staffs of the Executive Councils, as distinct from the Ministry, were clerks

Population and Expenditure under N.H.I. and N.H.S.

Area and Service		NATIONAL HEALTH INSURANCE		NATIONAL HEALTH SERVICE		
		Esti- mated popula- tion served	Expendi- ture in year ended December 31, 1947	Popula- tion served	Revised estimate of expenditure 5.7.48- 31.3.49 scaled up for twelve months	Estimated expenditure 1949-50
		'000's	£	'000's	£'ooo's	£'ooo's
ENGLAND AND WALE	s					
Medical	•••	20,051	15,414,921	42,852	39,733	40,400
Pharmaceutical		20,051	6,290,575	42,852	21,633	19,000
Dental		11,600	1,493,415	42,852	25,333	28,204
Ophthalmic		8,000	611,602	42,852	18,000	12,420

Medical		2,316	2,243,000	5,130	5,333	5,400
Pharmaceutical		2,316	526,000	5,130	1,987	1,800
Dental		1,400	248,000	5,130	3,733	2,700
Ophthalmic		1,000	78,000	5,130	1,960	2,250

The medical figures under National Health Insurance do not include maternity services (provided under N.H.S.). The expenditure figures for dental and ophthalmic services under N.H.I. are costs to public funds and do not include certain benefits paid for by patients under N.H.I. and by the State under N.H.S.

brought in to get rid of arrears. The Ministry would have its statistical picture of the flow of applications from the various forms of service—dental, ophthalmic "and all the rest of it." When the curves began to drop, the staff curves should also begin to drop, and if they did not, there was a prima facie case for investigation. It was not left to Executive Councils to decide what rate it should pay to its subordinate officials. Salaries varied according to the size and responsibility of the work of the Executive Council.

Estimated Cost Per Prescription

Examination of the pharmaceutical estimates occupied the whole of February 22 and part of March 1. The Accountant-General, Ministry of Health (Mr. H. H. George), said it had been assumed in drawing up the original estimates that the number of prescriptions would be about double the number under N.H.I. The average cost had been taken at 2s. $7\frac{1}{2}$ d., and it had been assumed that about seven-ninths of the amount due would be paid in the nine months—that there would be a lag of two months' payment. The amount by which

the estimate (£11,450,000) had been exceeded (£4 $\frac{3}{4}$ millions) was almost entirely due to the number of prescriptions. The actual cost proved to be 2s. $\frac{8}{2}$ d. instead of 2s. $7\frac{1}{2}$ d. per prescription.

Amount Per Person at Risk

Sir George Henderson (Permanent Secretary) said that the information the Ministry had from N.H.I. was that the average amount per person at risk was 4s. 9d. It had been assumed that the amount per person at risk under N.H.S. would be 6s. 6d. In fact, it was just under 8s. The increase in the estimate was £240,000. Of that, an estimated £100,000 was due to a higher dispensing fee than "We were quite had been estimated. clear that the 9d, previously paid was inadequate, but we had thought is, was the figure at which we would settle with the chemists, and that is the figure we used; in fact, the figure settled was 1s. 3d." Part of the increase was due to the payment for containers amounting to £90,000. The balance of £50,000 was due to the un-expectedly high number of prescriptions that had been made out, the high frequency.

"Machine Works Well"

Asked by the chairman whether there had been any difficulty in the actual working out of the scheme, Mr. George said "I have not heard of any difficulty. The machine works quite well . . . The machine is that the Executive Councils pay the chemists' bills, but they have joined together in various little groups set up by the Executive Councils whom they serve." If the pricing bureaux found anything exceptional they referred it to the Department. They were surprised to find that the number of prescriptions went up in a greater proportion than the population served. "We expected that, if twenty millions, had so many, forty millions would have just twice as many, but we get more than that."

THE CHAIRMAN: Is the excessive number of prescriptions due to drugs of any type coming under prescription now that formerly were not?

MR. GEORGE: It is very difficult to say, but I should imagine that some people who before went to a chemist to get a bottle of aspirins now go to the doctor. That is the sort of reason. They get even the cheap things free.

SIR GEORGE HENDERSON thought prob ably the publicity scheme had received had made that difference. There was probably a better appreciation of what a persor could get under the new scheme. direct answer was given to a question whether the dispensing fee was too high or whether there were any reports of excessive earnings by chemists, but an analysis was given of the way in which chemists' earnings were made up and how the average dispensing fee of 1s. was correlated with the differential fees for various operations. Eighty per cent. of a chemist's account, based on the figure paid the pre-vious month, was paid at once. "The money goes out rather quicker than we anticipated."

Pricing Bureaux' Work

Mr. George said the pricing bureaux were really flooded out and that was why the system of not pricing everything had been adopted. "Theoretically, we ought to price everything, but with these millions in England and Wales—and we shall have about 125 million prescriptions in these months — it is a tremendous amount of work."

Sir George Henderson was asked whether it was hoped eventually to price every single item. He replied: "What we may do is this: when we get more experience the 80 per cent. may go up higher. We find there is so little divergence month by month in the average price per prescription that we can take a risk and recover next month if we have paid too much." They were satisfied that the present method was reasonably near the mark, but to be quite frank were looking to see if they could not get even shorter cuts. Mr. H. H. George agreed that the system was not in accordance with the original regulations. "The regulation says we are to price the prescriptions, and the way we are doing it is to price a quarter of them and apply that average to the rest, and that is done by agreement with the profession." So far as he knew, the chemists had raised no objection. "As long as we get the right answer and get the money out quickly, that is the thing that matters."

A question was asked about excessive prescribing. Ought not the chemist to be given some sort of instruction to draw attention to cases like that. "It is a little difficult to get chemists to criticise doctors' prescriptions," was the reply.

UNSOLVED PROBLEMS OF THE SERVICE

By G. H. Armitage

THE late Sir William Glyn-Jones—a one-time chairman of the Middlesex Insurance Committee—stated on one occasion to the Royal Commission on National Health Insurance: "Probably the average practitioner, I say with

Mr. G. H. Armitage

great respect-and the average pharmacist, does not worry himself very much about the machinery of In-surance Committees provided the terms and conditions are satisfactory." Probably the same remarks apply under the National Health Service. Backed up by the manufacturers and wholesalers, chem-

ist contractors have, under N.H.S., given 100 per cent, service throughout the pharmaceutical field during normal hours. Yet they are acutely aware of unsolved problems. One of these is the problem of providing a standardised dispensing service outside contract hours. In this connection it is worth recalling that, under the regulations applying to the medical profession, "A practitioner is required to supply to a patient such drugs and appliances as are required for immediate administration or application or for use befor a supply can be obtained otherwise under the regulation." This clause while providing for emergencies, does not exonerate contractors from providing a reasonable service outside normal hours, either by a general rota system or by a late service on a shift-basis. However, the onus of securing that late service falls on the Hours of Service Committee of the Executive Council.

Trespass?

At the moment, some "fussiness" is being displayed by certain medical officers of health within the Metropolitan boroughs, who are making inquiries whether patients have complained of difficulties in getting their prescriptions dispensed at chemists shops outside normal hours. If so, action is promised. Such action constitutes an encroachment on

what is properly within the province of the Executive Council and its "Hours of Service" Committee.

Service" Committee.

Drug Tariff fees, which do not err on the side of generosity, seem to be based upon a normal working week for the chemist, as governed by the Shops Acts and Regulations. Yet by education, professional skill, training, and responsibility. the pharmacist ranks as a specialist. Each E.C. 10 handed in represents an individual service at three levels:—(1) Clerical, to ensure correct timing, and smooth working in the dispensary; (2) manipulation, plus labelling, checking, and the fulfilling of statutory obligations, or the supervision of those operations; (3) handing over the medicine to the patient, and finally sorting out the completed E.C.10's and bundling them in the prescribed manner. To carry out these services, the contractor secures a site, provides premises, stocks, and equipment, and meets all overheads. The premises often necessitate repairs, and leases require renewals, often at enhanced rates. Clearly the Minister is getting a pharmaceutical service at a very reasonable price, for a local authority, in setting up and operating a health centre and providing a dispensing service. would have to charge up those running costs to public funds, and John Citizen, not John Pharmacist, would foot the bill.

Burden of Delayed Payments

Even with the recent increase of 10 per cent. in the advance payment, delay in settling contractors' accounts is a grievous burden to the average self-employed pharmacist. In the absence of financial backing resort has had to be taken by some to loans or subsidies to meet commitments. Private dispensing has dropped considerably. Sales of proprietary medicines have diminished. So have counter sales of first-aid and surgical equipment. The decline in turnover in proprietary medicinal preparations is, I believe, only temporary. Sales, over the counter, of chemists' sundries will increase when the supply position improves, and nostrums of proved value will in due course return.

The staff position is not improving. It is so difficult that Executive Councils are being recommended, by rota arrangements, to enable chemists to close their premises for a week or two in the summer in order to secure a holiday.

HOSPITAL OUT-PATIENT WORK UNDER N.H.S.

By A. E. Footitt (pharmacist, Royal Northern Hospital)

THE introduction of a National Health Service has brought about certain changes in procedure and treatment at the hospital out-patient department which have had their repercussions on the pharmaceutical department of the

Mr. A. E. Footitt

hospital. Most outstanding because of its immediate effect has been the disappearance of that hospital G.P.—the Out-patient Medi-cal Officer. It was he who did the preliminary sorting out of patients, many of whom came without prior reference to their private doctor, and referred those whom he did not feel competent to

treat to the appropriate honorary physician or surgeon. Since July 1948 all outpatients have been sent by their general practitioner or have been transferred from other departments for further examination or special investigation. Those patients then pay a second visit, when their report is considered and treatment decided.

If the treatment is one that may be carried out by their general practitioner, the patient is referred back to him. The immediate effect of this change of procedure on the pharmaceutical department was a sudden drop in dispensing. Some familiar faces are now seen again at the out-patient window, and evidently a number of old chronic cases have contrived to persuade their G.P. to refer them back to the hospital. New specialist clinics have appeared and are still appearing (e.g. rheumatic, diabetic, neurosurgical, spastic, parenthood, psychiatry, etc.) so that the work of the pharmacist is now to a large extent finding its old level as the number of out-patients steadily increases. Although the use of drugs and their character has been changing over a number of years, the factors mentioned above have accelerated the use of many new products which the increased consultant staffs desire to use.

New Drugs

Often such drugs are only in their experimental stage (e.g., p-aminosalicylic

acid for tuberculosis, copper injections for arthritis, undecylenic acid orally for psoriasis, large doses of hormones orally and by implantation, new applications of penicillin and streptomycin, and many others). Thus the work of the out-patient pharmacist has become more interesting, but if he is to dispense these newer drugs intelligently he must of necessity keep himself well informed of the literature relating to them. The hospital pharmacist looks anxiously at his drugs bill when he sees the mounting cost of such treatments, but at the same time feels hesitant to curb the prescribing enthusiasm of his medical staff. An initial supply of drugs may be obtained from the hospital by some out-patients, while others are required to make several visits for special treatment, during which they also may attend the dispensary. It is perhaps too early to assess the effect of the National Formulary upon prescribing for outpatients. Individual hospitals and particularly the teaching and other large voluntary ones have been jealous of the use of their own pharmacopæias. A general adoption of the N.F. by hospitals would make for uniformity, while favourite formulas could be collected and added as a supplement by each hospital. With the development of the hospital service, many more hospitals have out-patients attending.

Effect of Grouping

Different methods have been devised for providing medicines, and these were recognised in February by a statement from the Minister. The grouping of hospitals has in some instances enabled pharmaceutical staffs to be transferred for a day to a subsidiary hospital. owing to distance or staff shortage, this has been impracticable, special provision has been made for prescriptions written upon the pink form E.C.10 (H.P.) to be dispensed by an outside contractor. With economies in the National Health Service being forced upon us, the Ministry would no doubt carefully consider the relative costs of dispensing by a contractor and in a hospital pharmaceutical department before extending that system to all out-patients. Already a compromise is seen in the scheme for bulk prescribing for boarding schools and certain institutions, while the hospital pharmacist has lost his right to become a contractor,

JENNER, PIONEER OF VACCINATION

The birth 200 years ago of Edward Jenner (the discoverer of vaccination), was celebrated in London recently by a bicentenary meeting of the Royal College of Surgeons, and by the opening of an exhibition of manuscripts (including prescriptions) and other exhibits associated with him at the Wellcome Historical Medical Museum, London, Born the son of a parson at the

Old Vicarage, Berkeley, Glos, on May 17, 1749, Jenner lived to become (in the words of Sir Edward Mellanby in the bicentenary lecture to the Royal College) "the parent of modern work on viruses and virus diseases, and even of modern immunology." Apprenticed at the age of thirteen to a surgeon at Sodbury, near Bristol, with the intention of becoming an apothe-cary, Jenner studied pharmacy and surgery. In 1769, the age of twenty, he became an apprentice to John Hunter, then a surgeon at St. George's Hospital, London, and the owner of a mena-

gerie (where he made his celebrated studies on the structure and habits of animals). Natural history had equally been a subject close to Jenner's heart since a boy, and while with Hunter he was given the responsibility of arranging the botanical specimens brought back by Captain Cook on his first voyage to the Pacific. On returning to Gloucestershire as a country doctor (he had an M.D. of St. Andrews University), he continued his natural history studies, maintaining a close correspondence with Hunter. It was in a letter (concerning the temperature of hibernating animals) that Hunter sent Jenner advice, since made famous: " . . . but why think? Why not try the experiment?"

Cowpox from a Dairymaid

While an apprentice at Sodbury, Jenner had been struck by a young country-woman's statement that she could not take smallpox because she had had cowpox. Hunter had not been interested in Jenner's report of this, but years later, after Hunter's death, Jenner noticed that he could not innoculate successfully persons

who had previously had cowpox. Jenner, therefore, set out to show that cowpox protected against smallpox, and that cowpox could be transmitted one human being to another. In May 1796, he innoculated a boy (James Phipps) with matter from a typical cowpox lesion on the finger of a dairymaid (Sarah Nelmes). The boy was subsequently innoculated with matter from a smallpox case, and the innoproved culation unsuccessful. treatise he sent to the Royal Society on this observation was refused, with an admonition, but Jenner added more

EDWARD JENNER, 1749-1823
(from a mezzotint by W. Say after J. Northcote in the National Portrait Gallery).

material to the report and published it privately as a book. The demand for the book necessitated three editions to be published, while the work was also translated into many foreign languages. Difficulties later arose because of the absence of volunteers as subjects for vaccination, but after Henry Cline, a London surgeon, had confirmed that vaccination produced immunity to smallpox, the practice of vaccination began to spread. In 1800 Jenner personally vaccinated the 85th Regiment. About the same time vaccination spread (with the help of Professor Benjamin Waterhouse) to America and afterwards to France. Spain, the Mediterranean countries, and finally throughout the world.

LYMPH PRODUCTION AT THE LISTER INSTITUTION

In modern laboratories at Elstree, Herts, the vaccine lymph department at the farm of the Lister Institute of Preventive Medicine continues the work initiated by Edward Jenner (see p. 853) of preparing material for innoculation against smallpox The department, which issues some oneand-a-half million doses of vaccine lymph annually on behalf of the Ministry of Health, and maintains a reserve stock against possible epidemics of about two million doses, is one of the few establishments in Britain now producing this important prophylactic agent. In addition to supplying lymph for the public health services in Britain, H.M. Forces, and authorities in the Colonies, the depart-ment issues lymph for private sales (Allen & Hanburys, Ltd., having acted as agents for the Institute's products since 1895).

Workers at the Lister Institute began preparing smallpox vaccine in 1905, using calves, as did other producers, for innoculation purposes. During the 1914-18 war, however, the supply of calves became difficult, and Dr. Green, then in charge of the work, investigated the possibility of using sheep. Tests showed that sheep vaccine was as active as calf vaccine, and as sheep do not suffer from tuberculosis and are more easily kept clean than calves, the Institute has used sheep ever since,

Six sheep are used each week for the production of the lymph at the laboratories. After keeping the sheep in quarantine for a fortnight each animal is tethered securely on its side on a specially designed table. A final health examination is made.

and, if the result is satisfactory, the whol of the sheep's flank is clipped and thoroughly washed. An area from th shoulder to the hip joint, and from the centre line of the back to the underline of the belly is then closely shaved, and the shaved and surrounding areas are again washed, and the shaved area finally washed with ether soap, and rinsed with sterile distilled water. The surround is covered with sterile towels. The washins period occupies at least one hour, as stringent washing procedure reduces the bacterial contamination of the lymph.

Vaccination of the Sheep

The shaved and cleansed area of the sheep is lightly scarified with a sterilised eight-bladed scarifier (see Fig. 1), and about 8 mils of seed vaccine are spread evenly over the scarified area with a sterilised spatula. (The seed vaccine contains virus derived from a smallpox strain in Cologne late in the nineteenth century, and adapted by passage through animals to form vaccinia virus. At the Institute's laboratories the virus is passaged in sheep and rabbit alternately). Each sheep, after innoculation, is returned to a special pen for a four-day incubation period.

At the end of the incubation period each sheep is killed, secured on a table, washed as before vaccination, and dried by dabbing with sterile towels. The vaccinated area is thoroughly curetted with a specially designed Valkmann spoon, and the pulp, so obtained (pale pink in colour from the slight blood-contamination) is

Fig. 1. Washed and shaved flank of Fig. 2 Pulp obtained by curetting the flank of the previously sheep being scarified before inoculation, killed sheep being transferred to a sterilised bottle.

Fig. 3. Apparatus for "dispensing" lymph. A bundle of about 800 capillary tubes (shown in centre of desiccator) is lowered into the beaker of vaccine lymph (below). Sufficient lymph for one dose is drawn simultaneously into each of the tubes, by vacuum action, and the ends of the tubes are washed with sterile water.

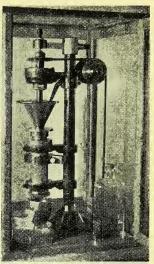

Fig. 4. Machine (enclosed in a glass case) with which the pulp is ground. The machine is operated by a belt drive from an electric motor below the bench.

transferred from the spoon to a previously weighed and sterilised stoppered jar, labelled with the number of the sheep (see Fig. 2). The weight of pulp from each sheep is recorded, the sample given a laboratory batch number, and stored at —10°C. until it is required for grinding.

Grinding the Pulp

To reduce the crude plup to a uniform emulsion the pulp (after thawing sufficiently) is passed through a grinding machine (see Fig. 4). This apparatus acts like a miniature sausage machine and consists essentially of a nickel rod with a diminishing screwthread which revolves in a vertical nickel sleeve. Each batch of pulp is ground separately. The pulp is poured in the machine (previously autoclaved) through the funnel, and the ground material is delivered at the bottom of the sleeve into a sterile crucible. The process is conducted in a "semi-sterile" atmosphere the sealed room being subjected to a triethylene glycol aerosol for one hour while the benches are oiled before commencement of the grinding. During the process a 1 per cent. phenol solution is incorporated (2 c.c. to each gm. of pulp). After grinding, the lymph is in-cubated at 22°C. for forty-eight hours, during which time the phenol greatly reduces the number of contaminating organisms. The lymph is stored at 0-4°C.

The product is tested bacteriologically (on agar plates) to ensure that, after the exclusion of recognisable pathogens, the number of living bacteria and other micro organisms is within the limit set by the Therapeutic Substances Act. (In practice, because of the special washing precautions taken at the vaccination and collection and the action of the phenol, the number is usually well below 1,000 per mil).

Glycerin Added

Two parts of glycerin (a substance which, as S Monckton Copeman pointed out in 1891, gradually reduces the bacterical contamination) are then added and the product is tested, as required by the Therapeutic Substances Act, for the absence of hæmolytic streptococci, Bacillus Coli, tetanus and anthrax organisms. Batches which pass these tests are pooled (in lots of about 1,000 mils), tested for potency by comparing with a known sample their power, when diluted (from 1:1,000 to 1:16,000) to produce characteristic lesions on the scarified flanks of a rabbit. If sufficiently potent, the lymph is dispensed by a vacuum device (see Fig. 3) into capillary tubes containing one dose. and sealed. The sealing process is done

by hand because no satisfactory sealing machine has yet been devised for the purpose. The tubes are then stored between – 10° and – 15°C. until required for issue. Multiple doses (for group or mass vaccination) are issued in ampoules. When dispatched the tubes are packed in a box made of insulating material (expanded rubber) with a tin of ice which maintains the lymph at or about 0°C, for forty-eight hours.

In addition to producing vaccine lymph, workers at the laboratories are actively engaged in research. An experimental study, for example, is being made on the conditions under which a dry stable prepara-

tion of vaccinia can be obtained which would be suitable for use in the tropics, and could be stored without refrigerators. Research is also in progress on the production of a vaccinia preparation (for immunisation) cultivated on developing chick membranes, which would be free from bacteria, and which could be injected.

The Lister Institute, which dates from 1889, is a private research organisation and a school of the University of London, and obtains its income from endowments, donations and the sale of therapeutic substances. Any profits made from the sale of its products are used for the Institute's research activities.

A NEW WEST-END SHOWROOM

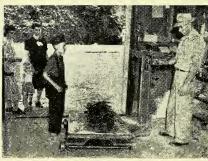

On June 20 a new West-end showroom was opened by S. Maw, Son & Sons, Ltd., at 67 Jermyn Street, London, S.W.1. Many chemists throughout the country will remember the company's pre-war showroom in the City. Just prior to the 1939-45 war, when a move was made to modern and extensive premises at Barnet, Herts, the showroom was temporarily transferred there. Now the company has found suitable premises in an exceptionally convenient position only four minutes from Piccadilly Circus. The new showroom, fitting rooms and telephone order department are in the Maw tradition of dignified, professional, yet businesslike presentation. The goods include Messrs. Maw's range of chemists' and surgical sundries, an exceptional choice of display stands, showcases and signs, together with new products and ideas for retail display. Invitations to visit the showrooms are being sent to all pharmacists, who are being invited to use it as a convenient centre when in London. The opening coincides with a reorganisation of the company's order system to deal efficiently with the large volume of orders now being received from chemists and hospitals all over the country, while retaining the element of personal service.

The chairman of the company (Brigadier A. R. W. Low, C.B.E., D.S.O., B.A., M.P.), in an address at the opening of the showroom, explained that the company was appreciative of the competitive times that were almost upon the country and the showroom was a symbol of efforts to give that efficient service required by chemists, The showroom was formally opened by Mrs. M. J. Maw, mother of Mr. Denys Maw (general manager).

DRUG COLLECTION IN NORTH CAROLINA

N North Carolina, the collection of medicinal herbs, barks and roots is undertaken by hundreds of families on a seasonal and part-time basis. The material is brought in (1) to depôts such as that of Mr. R. T. Greer, Lenoir, illustrated, and weighed (3) and paid for on the spot. Dried bark (2) is baled and shipped in vanload quantities to pharmaceutical manufacturers.

PHARMACEUTICAL SOCIETY OF IRELAND

MR. P. A. Brady (president) was in the chair at a meeting of the Council of the Pharmaceutical Society of Ireland held in Dublin on June 14. Also present were Messrs. T. C. Scott (vice-president). J. Gleeson (treasurer), P. C. Cahill, G. C. O'Neill, N. A. McKane, R. Daly, M. Power and H. P. Corrigan, Senator F. Loughman and Messrs. T. B. O'Sullivan, P. Brooke-Kelly, P. F. McGrath, C. J. Cremen, A. P. Toher, J. P. Kissane, M. Costello, and J. A. O'Rourke.

Tribute to the Late Mr. F. X. Meagher

THE REGISTRAR (Mr. James G. Coleman) formally reported on the death of Mr. Francis Xavier Meagher, M.P.S.I.

Before proceeding with the ordinary business, the President asked the Council to join with him in passing a vote of sympathy with the widow and family of the late Mr. F. X. Meagher. Mr. Meagher had been present at the previous Council meeting only a month ago, said the president. He had taken a keen interest in the work of the Council and had been one of its ablest members. Mr. Brady said that it had been his privilege to know Mr. Meagher both socially and in business for a great number of years as a man who had set himself a high standard. Not only would he be greatly missed at the Council table, but Irish pharmacy as a whole had suffered a grievous loss. Both in Council and in committee Mr. Meagher had spoken only after careful deliberation, and with authority behind everything he said. Members of the Council then rose and, in silence, passed a vote of sympathy with Mrs. Meagher and her family.

A letter from Dr. T. P. C. Kirkpatrick

(registrar of the Royal College of Physicians) stated that, in accordance with the request of the Council, a resolution had been passed by the president and fellows of the College requesting the Minister for Justice to have placed on the poison schedules the preparations recommended by the Council. [The Council had all preparations, that or admixtures, or other substances taining 0.05 per cent. or more of strychnine, should be placed in Part I of the poison schedule; and that all preparations, or admixtures, or other substances containing not more than 1.5 per cent. of codeine (calculated as alkaloid) associated with any other medicinal substance should be placed in Part II of the poison schedule.

The reports of the House. Law ar Schools Committees were submitted ar approved.

The licence certificates of the following were signed and sealed: The Misses E. Dillon, A. M. Kelly, E. MacNamar M. M. A. O'Flynn, A. M. O'Rorke, S. N. Walsh; and Messrs. E. B. Corbett, J. de Loughry, T. K. O'Keefe, M. Pennington, J. O'Riordan and H. N. Scroope.

The following changes of address we notified:—Miss E. Ryan, L.P.S.I., to Lower Mountown, Dun Laoghaire, co Dublin; Mr. C. O. Greene, L.P.S.I., t the Medical Hall, O'Curry Street, Kilker co. Clare; Mr. P. J. Morgan, M.P.S.I., t 40 Clarendon Street, Dublin.

New Members

Messrs. M. J. Fahy, J. T. Foley an T. Cahill were elected members of th Society. The following were nominate for membership:—Mr. J. F. Harnett L.P.S.I., Killarney; Miss E. Ryar L.P.S.I., Dun Laoghaire; Messrs. M Moloney, L.P.S.I., Limerick, C. C Greene, L.P.S.I., Kilkee; and J. Roche L.P.S.I., Dublin, Miss N. M. Kennedy L.P.S.I., Roscommon, and Mr. H. N Scroope, Nenagh.

Penicillin for Veterinary Use

A report was read from Mr. John J Gaynor (law adviser) on the question o whether penicillin veterinary cerate was covered by the requirements of the Peni cillin Act or of the Therapeutic Sub stances Act. A letter addressed by the Council to Mr. Gaynor on May 11 said members had argued that the preparation was not an injection in the technical meaning of the word as it was inserted into a cow's teats by squeezing the contents of a collapsible tube, and therefore could be considered a local application. Normally an "injection" implied a means of introducing a medicament into the blood stream, muscular tissue or spinal fluid, etc.. into a part of the body normally without direct access. The law adviser, at the outset of his report, cited the relevant sections of the Therapeutic Substances Act, 1932, and said he assumed that the substance he was dealing with was a derivative of Penicillium notatum. An important difference, he stated, must be

oted in the Irish Order as compared ith that affecting Great Britain (S.R. O.,1946, No. 467), in which the following was added at the end:—"... being nacid, salt, or derivative, or a solution nereof, prepared for parenteral injection." To such limitation was contained in the rish Order. "I am therefore of opinion," aid Mr. Gaynor, "that on the assumpons which I have made in this report he article referred to is controlled by the herapeutic Substances Act, 1932, and the egulations made thereunder."

An Important Issue"

MR. BROOKE-KELLY said that, in his iew, all such matters should be discussed nd determined by representatives from he different learned bodies connected with nedicine and not left to the decision of Minister, MR. KISSANE said that the vhole matter arose out of the wholesalers' estriction, at the instance of the Departnent of Agriculture, of the sale of peniillin veterinary cerate to veterinary sur-The order to import the cerate ad been made by the Minister for Health, and he urged that the Council should send deputation to the Minister asking him why he had caused the sale of the preparation o be restricted to veterinary surgeons. As hemists, members were not interested in he using of the preparation but, under heir qualification, they were entitled to stock and sell it. The whole matter raised in important issue which chemists must follow up.

MR. McKane said all the trouble had arisen over enabling clauses giving powers to Ministers. MR. O'ROURKE thought there was a case to show interference with the rights guaranteed under the constitution. MR. Daly said there was nothing in Mr. Gaynor's report to indicate that the Minister had any power to control the retail sale of the product. MR. CAHILL (the Council's representative on the Therapeutic Substances Committee) said he did not recall that the committee had ever been asked any question other than whether or not a substance was "a therapeutic substance."

Minister's Authority Questioned

MR. CREMEN doubted whether any Minister had the right to attach to an importation licence any condition dealing with distribution. Senator Loughman thought the Minister had no power to control distribution. MR. GLEESON suggested that

the Council should ascertain what were the Minister's powers. Mr. Brooke-Kelly considered that pharmaceutical chemists had the right to deal with every preparation included in the British Pharmacopæia. MR. McKane said the Minister could not be allowed to ignore chemists' rights. Mr. CREMEN said that if the suggestion was that chemists had no right to sell penicillin or injections, it cut across the whole qualification. THE PRESIDENT thought that the before doing anything else, should get a definite answer from Mr. Gaynor as to whether the Minister could impose conditions regarding retail sale. SENATOR LOUGHMAN said he thought the Minister for Agriculture, rather than the Minister for Health, was responsible for the present restriction. Mr. Scott asked whether, if an Irish firm made the preparation and offered it for sale, the Minister could stop chemists from selling it. MR. CAHILL said a manufacturer would have to get a licence to manufacture, and the Minister might attach a distribution restriction. Mr. O'ROURKE said the Department of Agriculture had coerced the wholesalers into giving an undertaking that was not part of the licence.

Deputation to Minister

MR. McGrath said he did not think it was a question of legality, but rather that the Department of Agriculture wanted to bring the preparation into the country and control it through veterinary surgeons. The Department of Health was not in the least concerned, and merely wished to do what the Department of Agriculture asked. He thought an application to the Department of Health should be successful. It was unanimously agreed to send to the Minister for Health a deputation consisting of the president, the president of the Irish Drug Association (Mr. J. J. Roche), and Messrs. Kissane and McKane.

Discussion on Education

The Council then went into committee and discussed at length a detailed report from the Education Committee dealing with proposed changes and revisions.

At a meeting of the Benevolent Fund Committee held at the close of the Council meeting, grants to the value of £68 were bassed for payment. The thanks of the Council were extended to the Irish Chemists' Golfing Society for a donation of £5.5s. to the Fund.

TRADE REPORT

Spot quotations for pharmaceutical chemicals represent the prices for wholesale quant ties of standard quality. Prices of crude drugs and essential oils vary as to brand or grad

28 Essex Street, W.C.2, June 22
The markets for Pharmaceutical and Fine Chemicals are little changed on the week and no price alterations have been notified. A good demand is being received for Aspirin and Ctitates from overseas buyers. Home sales of Bismuth salts have fallen off in recent weeks, since the introduction of the National Formulary, 1949; it is understood that all salts are in plentiful supply. Lower prices are announced for a number of industrial Solvents, and it is understood that reductions in the prices of Acetic acid and Acetic anhydride will follow shortly. These reductions may be reflected, in due course in gnotations for some products.

These reductions may be reflected, in due course, in quotations for some products.

The principal feature of the CRUDE DRUGS markets has been ERGOT; all supplies on the spot have been cleared at 8s. 3d. per lb. Shippers concur that the Portuguese new crop of ergot is a failure, and are asking prices from 8s, to 10s, per lb., c.i.f., for the remainder of old-crop supplies. U.S. shippers are offering new-crop Cascara sagrada at about 140s, per cwt., c.i.f., but no business is reported. A parcel of Grindella, for processing for export, is offered at 1s, 10½d, per lb., duty paid. Good-quality Alexandrian duty paid. Good-quality Alexandrian SENNA PODS, in short supply on the spot, are in good request. Reports from India say that the wet-crop harvest for Tinnevelly sennas has now commenced, although, owing to exceptionally heavy rains, bulk arrivals are not expected in the In-dian market until the end of June or early July. Shippers' prices are high, early July. Shippers' prices are high, prime bold Tinnevelly leaves, for example, are 1s. per lb., c.i.f., while the best handpicked pods are quoted at 1s. $3\frac{1}{2}$ d., c.i.f. In other sections of the markets, rather higher prices are asked for Sumatra Ben-ZOIN on spot. Kordofan GUM ACACIA is dearer forward. TRAGACANTH, selected white ribbon, is firmly held at the higher spot price of £90 per cwt. MENTHOL prices are unchanged. ESSENTIAL OILS have attracted a routine inquiry. Supplies of Ceylon CITRONELLA on the spot are small and the market is firmer. With an absence of forward offers of Lemongrass, the spot quotation is dearer by 1s. per lb.

U.S. Drug and Chemical Report New York, June 17

Demand generally for Pharmaceutical and Fine Chemicals is lower than at the corresponding period of last year. One producer is to increase prices of Alcohol by 10 cents per gall, from July 1, and it is expected that other makers will also increase prices in the near future, which will halt the downward tendency in prices of derivatives and other solvents. Although

the market for ACETIC ACID, ACETON ETHYL ACETATE, BUTYL ALCOHOL at several other chemicals is expected to 1 firmer, no price increases are anticipated MENTHOL prices are in the region of \$1 to \$11.25 per lb., but it is reported the business has been done at as high as \$1 per lb. It is estimated that there is about 100 tons of menthol in New York, su ficient to cover domestic requirements for six months; the heavy consuming seaso is almost that length of time ahead. Drugs the Crude markets, Cascar SAGRADA is showing an easier trend, wit spot goods offered at 28 cents to 30 cent spot goods offered at 28 cents to 30 cent per lb. Papain is in good request and firmer market is anticipated. There is good spot request for Valerian but supplies are small. Jamaican Ginger is reported selling from 1½ to 2 cents per ll lower than the African product. Cump seed is a very firm market but Turkis seed in a very firm market but Turkis arrivals next week should alleviate a spo shortage. Prices of GUM TRAGACANTH have fluctuated recently, with business done in No. 1 grade at up to \$3.50 per lb. Holder of Chamomile flowers have been accept ing bids somewhat lower than their re cent quotations. In the Essential Oil markets, most sections have been quiet with prices unchanged. Geranium has declined from \$12 to \$11.75 per lb. Distilled LIME has increased in price from \$2.50 to \$3.50. Lemongrass is understood to be firm.

A. Johnston), 3 Lime Street, London, E.C.3.

When you have a 'family' business

... you are regarded by your public as something more than a chemist. From a bewildering range of proprietary names you are able to advise your customer which is the most suitable and reliable product to meet his personal need.

Many of the minor ailments encountered these days are due to Vitamin B_1 deficiency: anorexia, lassitude, "neuralgia" and similar conditions often respond to B_1 therapy.

There is a tendency, especially among housewives, to supplement rations with quantities of starchy food. Vitamin B_1 is essential for the full "utilisation" of carbohydrate, and lack of it may result in unhealthy obesity.

In such cases, when a palatable, liquid Vitamin B₁ preparation is indicated, you cannot do better than recommend 'Betaxan' Elixir. It is particularly suitable for slight deficiency of the vitamin in children.

CALL IN THE EXPERTS

The best way to ensure satisfaction in grinding is to call in the experts—Porteus. Not only do they know what exactly is required, but they can and do invariably advise on the best type for the job in hand. Lengthy experience in design and construction is at your service—why not write now?

GEORGE PORTEUS & Sons (Leeds) Ltd. LEEDS BRIDGE WORKS, LEEDS 10

NTECON · PENTECON · PENTECON

the advantages of the **PENTECON**

Autoclave

THERMOSTATIC CONTROL

e thermostat, independent of the pressure factor, the most accurate means of obtaining a consistent mperature. Designed for use over a gas ring or rtable burner, it is constantly in control, after tial adjustment to suit the requirements.

Made from a special formula aluminium, the Pentecon' is light and handy to move about. The lid design provides a steam-tight joint, which cannot be opened under pressure.
To use saturated steam, allowing operation at

lower pressure in relation to temperature, an Air Blow-off Valve is fitted. A Pressure Regulator Valve whistles when the required temperature is reached.

ture is reached.

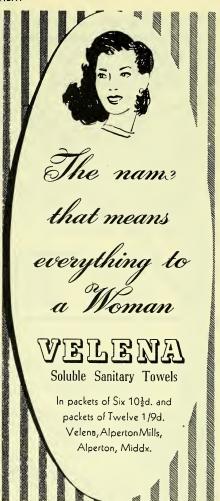

The temperature of a liquid in an open vessel within the 'Pentecon' can be checked by previously inserting a chemical thermometer through a gland in the lid.

CAPACITY—11" x 10\frac{1}{2}". Contents approx. 26 pints or seven 20 oz., or M.R.C. Standard Blood Bottles.

The 'Pentecon' is economical in price and operating costs. Price (excluding gas ring and flexible tubing, which are not £16.16.0 supplied)

fully descriptive leaflet will be sent, post free, on quest to Dept. 3, Pentecon, Ltd., Accrington. Please ntion the name and address of your normal supplier.

Prolonged Protection

AFTER the successful application of an antiseptic, there still remains the risk of fresh contamination by pathogenic organisms. It is important, not only that the barrier should be effective when first set up, but that the protection should be prolonged.

The protection conferred by 'Dettol' is durable. It has been shown that if 30% 'Dettol' is applied to the skin and allowed to dry, the area remains insusceptible to fresh infection by streptococcus pyogenes for at least two hours.*

*This experimental finding (J. Obstet. Gynaec. Brit. Emp. Vol. 40 No. 6) has been confirmed in obstetric practice extending well over a decade.

THANK YOU

all for your response to our advertisement regarding Purchase Tax and Income Tax impositions in the June 4th issue of "The Chemist & Druggist".

Every letter received will be answered in due course.

In the meantime, we shall continue to fight the impositions of these high taxes four years after the War.

May we ask you to protest to your trade papers, your trade associations, your customers, your local newspapers, your Chambers of Commerce, etc. We shall get action if we unanimously resist these impositions. The time has now come.

HOLIDAY BUSINESS FOR YOU!

Our usual Nation-wide advertising is continually stressing the care of the eyes, and this is of course particularly applicable to all holiday-makers, who during the summer months must at some time or another encounter the effects of glare, dust, salt-water, etc., on the eyes. In addition a publicity campaign opens this month in a selected number of seaside resorts, which will further emphasise the need for Optrex at this time.

Vast numbers of holiday - makers — your customers—will see these advertisements. That means heavy demand for Optrex, both on holiday and at home. Build up your stocks now and take advantage of this fine publicity.

DISPLAY MATERIAL

If you feel that your display material needs strengthening with a special holiday showcard (if still available) drop us a line quickly. We'll do all we can to help you.

GALA OF LONDOR'S

COLOUM

REGD. DESIGN

in the same shades as Gala Lipstick and Lip Line

When you're asked for Gala Lipstick or Lip Line, offer Nail Colour in a matching shade too. That way you make two sales where you only made one before. It's smart for women to match lips to fingertips with the same glowing Gala shade—it's smart for you to stock up with Nail Colour and be ready for this sure demand.

Make the most of the fascinating never-been-seenbefore bottle. Keep it on your counter where customers can handle it. Once a woman gets it in her hands—your job of selling is half done!

Nail Colour gets as big a publicity send-off as LIP LINE

Gala's success is built on quality, but it's backed by continuous, colourful, nation-wide advertising. See Nail Colour advertisements in NATIONAL NEWSPAPERS, WEEKLY JOURNALS, MONTHLY MAGAZINES, THEATRE PROGRAMMES, on the HOARDINGS, etc. It also gets generous EDITORIAL SUPPORT.

One of the latest Pepsodent Press advertisements

PEPSODENT tells a straight story

o dentifrice can accomplish iracles

ne extent to which a dentifrice can cleanse d polish the teeth is the only real measure its usefulness. The power of Pepsodent othpaste to do this job is second to none, for ied with the finest polishing agents obtainle is Pepsodent's exclusive Irium (a brand of ecially purified sodium alkyl sulphate), one of e most effective cleansers known to dental ience.

an toothpaste retard tooth decay?

ne Pepsodent Company holds that a first-class ntifrice has one major function in the prevention tooth decay - to keep tooth enamel free from leterious film. Laboratory tests over many years ve proved Irium to be unsurpassed in its power loosen surface debris and emulsify mucous film.

This is front-line protection, because if tooth amel is preserved from the action of the destrucve bacteria flourishing in film, the life of the teeth n be prolonged.

proved product—backed by owerful advertising

epsodent's straight, sensible, and scientifically proved aim is making a strong appeal to the public. Sales e up all over the country in consequence. To display epsodent is to sell Pepsodent! And don't forget, epsodent's favourable terms mean generous profits!

THE IRIUM IN Pepsodent FIGHTS FILM

Standard Size 1/4

Double Family Size 2/3

FILM ON TEETH GAN BE DANGEROUS The clinging, dulling film that clouds the whiteness of your smile is hard to shift. It is active with acid-forming bacteria that can pit delicate tooth-enamel. If left, film can form damaging tartar that only your dentist can

remove. Mere scrubbing will not deal with it effectively.

TWO-FOLD ACTION Pepsodent's exclusive Irium emu sifies and washes away stubbo film, uncovers the clean enam Pepsodent's wonderf safe, sure, polishing a

IMMEDIATE ACTION

Crash Fly Spray is in demand! Its proven deadly effect on flies and insects, whilst harmless to children and pets, have created an enormous public demand! This year it is to be advertised for the first time in leading national dailies and the Radio Times. Make sure you are carrying stock to meet the demand.

Also CRASH POWDER, packed in sprinkle topped drums. For home and pet use; a persistent and certain killer of Ants, Cockroaches, Clothes Moths, etc.,
